LETTER OF TRANSMITTAL.

DEPARTMENT OF EDUCATION,
AUSTIN, TEXAS, October 20, 1902.

To His Excellency, Governor Joseph D. Sayers.

SIR: I beg to submit herewith the Biennial Report of the Department of Education for the two scholastic years ending, respectively, August 31, 1901, and August 31, 1902.

Very respectfully,

ARTHUR LEFEVRE,
State Superintendent of Public Instruction.

THIRTEENTH BIENNIAL REPORT

OF

STATE SUPERINTENDENT OF PUBLIC INSTRUCTION.

Governor Joseph D. Sayers.

SIR: I have the honor to submit to you, and through you to the State Board of Education and the Legislature, the Biennial Report for the scholastic years ending August 31, 1901, and August 31, 1902, required by law of the State Superintendent of Public Instruction.

The statistical portion of this report is prefaced by certain remarks, discussions, and recommendations pertinent to present conditions of the State's work of education, and to practical means of increasing the efficiency of that work.

SIGNS OF PROGRESS.

There are many unmistakable evidences that Texas is upon the eve of a period of notable activity in educational work, that work which has been justly described as the prime business of a republic; and there are grounds for good hopes that this awakening energy may be so directed that an era of true advance and invigoration in the sphere of education may coincide with and secure and glorify the material development that is opening such magnificent prospects to Texas. Such a coincidence would constitute the choicest mark of divine favor.

To point to merely one of the many signs of the times to which I refer, attention is invited to the number of independent school districts recently created for the purpose of improving the conditions of school government and support:

Independent districts created during the year 1899-1900.....	26
Independent districts created during the year 1900-1901.....	14
Independent districts created during the year 1901-1902.....	55

Of the fifty-five independent districts created during the past year fifteen were established during the last three months of the year. Within the last year, also, local taxes have been levied in a large number of common school districts.

LOCAL SUPPLEMENTATION OF STATE APPORTIONMENT.

Such facts show that the people of many localities have recognized that local supplementation of the State apportionment is necessary in our system. Our permanent school fund is indeed a magnificent inheritance, but it falls far short of affording a complete endowment of the schools for the present generation.

This statement ought to be self-evident if one considered merely the

shortness of the term during which the public schools are maintained, especially in view of the fact that even at present local support amounts to more than 33 per cent. of the State apportionment. The general average length of school term for the children of the State for the year 1900-1901, including independent districts, was a little less than five and one-third months; and the average in common school districts was only four and nine-tenths months. Nevertheless, there has been so much talk, not to say boasting, of the munificent permanent school fund of this State that it is difficult to make the public realize that a good measure of local support is indispensable in our system. That necessity should, indeed, eventually prove advantageous, and it is profoundly accordant with the fundamental principles of true democracy in fostering local responsibility instead of entire dependence upon distributions by the State government; but meanwhile there can be no marked general advance in the educational affairs of Texas until local taxation becomes the rule and not the exception throughout the countless school districts of our broad land. From the first moment of opportunity for effective influence, I have bent every energy to directing public attention to the pressing importance of this question.

Comparative Statistics.

In this connection the following comparative statistics need no comment; they are taken from the latest report of the United States Commissioner of Education, and represent the facts at the close of the year ending August 31, 1900:

LENGTH OF SCHOOL TERM OF PUBLIC COMMON SCHOOLS.

United States.....	144.6 days
Maryland.....	188 days
Minnesota.....	169 days
Missouri.....	144 days
Colorado.....	149.8 days
California.....	166.2 days
Texas (9th from the lowest in the Union).....	108.2 days

TOTAL AMOUNT EXPENDED PER CAPITA OF POPULATION ON PUBLIC COMMON SCHOOLS.

United States.....	\$2 83
Maryland.....	2 47
Minnesota.....	3 21
Missouri.....	2 52
Colorado.....	5 18
California.....	4 65
Texas (12th from the lowest in the Union).....	1 47

ANNUAL EXPENDITURE PER PUPIL IN PUBLIC COMMON SCHOOLS.*

United States.....	\$20 29
Maryland.....	21 95
Minnesota.....	23 15
Missouri.....	16 99
Colorado.....	38 12
California.....	35 00
Texas (11th from the lowest in the Union).....	10 19

*The amounts given are the total annual expenditures per pupil for all purposes; in expenditure per pupil for school buildings during the year (1899-1900) Texas ranked seventh from the lowest, and in expenditure per pupil for teachers' salaries fourteenth from the lowest. In the report of the United States Commissioner "States not reporting are estimated"; and in this table a slight overestimate for Texas has been corrected. The correction, however, has affected the rank of Texas only on the first of the grounds stated, and there only by one point.

AVERAGE TEACHER'S SALARY PER YEAR.

United States.....	\$322 82
Maryland.....	416 02
Minnesota.....	364 02
Missouri.....	289 13
Colorado.....	454 54
California.....	708 88
Texas (14th from the lowest in the Union).....	260 32

These facts are recorded here, not to discourage, nor as foreboding a permanently low level for Texas in educational standards, because the explanation is apparent, in my judgment, in the circumstance already mentioned, that the public has received the impression from poorly informed orators and writers that the State school fund of Texas is sufficient for the best of school systems. An awakening from such dreams and interested attention to the realities of our public school system, I believe, is at hand. Gradually a correct conception of the practical conditions of educational work in this and other States will be formed in public opinion, until each school district supplements by a local tax the State and county apportionments. The burden upon the material resources of each district would be inappreciable (in fact, the cost would be returned with increase to each locality), and the benefits would be beyond price.

In regard to the inappreciable character of the necessary expense, it may be safely asserted that a small part of the amount contributed by *Texas* in the form of special Federal revenue for the Cuban and Philippine wars would have given this State public schools as well supported as those of any other State in the Union. I regret that I cannot cite at this writing exact statistics; but the people may estimate from their own experience with revenue stamps, etc., how difficult it would be to resume some part of that now happily abolished expenditure, in order to provide sanitary and refining school houses and grounds, longer school terms, the necessary school libraries and equipments, and better prepared teachers for those children for whose good in all other respects they cheerfully labor with continual self-denial.

The Practical Method Throughout the United States.

The method of local school support thus advocated is the practical method throughout our common country; and in the United States at large only 4 per cent. of money expended on the public common schools is derived from permanent funds, and only 16 per cent. from State taxation, leaving 80 per cent. supplied locally.

Provisions of the Constitution.

For such reasons, therefore, as well as upon the ground of the profound political and social principles involved in local responsibility, I would be opposed to any change of our present constitutional limit of *State taxation* for school purposes. (It may be remarked, however, that it would seem to be the clear duty of the Legislature to levy the full amount of that low limit in order to fulfill the mandate of the Constitution concerning the minimum length of school term. The time has come for deeds to take the place of words, and men should stop talking about their devotion to the common schools whose own district school "keeps"

only four or five months in the year, with one teacher attempting to teach fifty or sixty children of all ages.) On the other hand, the limit of one-fifth of one per cent. for local taxation in common school districts ought to be removed; for until this latter provision of our basic law is altered, it must remain impracticable for the majority of the rural schools of Texas to accomplish what all desire, and many fatuously expect in spite of existing limitations. In this question of the constitutional limit fixed for *local* taxation in school districts, both principles and practical conditions are totally different from those that require the wise restriction upon *State* taxation for the support of the schools. Few States set such a limit upon local taxation for schools in rural districts as Texas fixes for her cities and towns; yet it is not the life in the towns (although there is need of development at this point, and the time seems ripe for new invigoration there), but the vast expanses of rural life, the very foundations of the commonwealth, that I have in mind in this attempt to turn attention to a problem that concerns the interests of Texas perhaps more vitally than any other. In fact, most problems with which the statesmen of a democracy have to deal are matters of detail when compared with the concerns of the genuine education of the whole people. From this standpoint the cities, considered merely in themselves, are of secondary importance; for it is not only the virtue of a democracy, but its vital necessity that all its powers should be constantly renewed and its activities supported by supplies drawn from the life-sources of the entire community. The child, whether of poor or rich, whether of ignorant or well-trained parents, is beyond comparison the most valuable undeveloped resource of the State; and the majority of the most capable children in the State are growing up in the rural districts. This latter statement cannot be disputed without maintaining that the people who constitute the majority are incapable of development; whereas we know, on the contrary, that they are capable of unlimited elevation. Just as a community is not rich because in it dwell a few rich citizens, so a community is not intelligent because a few of its members are well trained and efficient. A man's capacity can be judged only by his opportunities; and his value to the State, as well as his absolute inner worth, is largely dependent upon his opportunity to develop potential skill and character. The natural or physical resources of a country are undoubtedly an effective factor in its development; but within certain limits they are by no means the determining factor. The very land of the most densely populated and thrifty country of Europe has been wrested from the sea. It is the community where the men and women are trained to intelligent industry, to justice, and to straight thought in all matters, that most powerfully attracts settlers. "After the first pioneer settlements are made, it is trained men that attract men, rather than natural resources. The right training of men is a better thing than the bounty of nature itself. Nature alone never made prosperous States."*

The secret of social well-being is what has been termed the mobility of society, that is to say, conditions which not only allow, but secure, tendencies whereby each individual may have an opportunity to find the sphere of action best suited to his powers, and thus reach his highest efficiency. To quote again from the notable little work already referred

*"The Rebuilding of Old Commonwealths," by Walter H. Page, 1902, p. 94.

to, "It is a shining day in any educated man's growth when he comes to see and to know and to feel and freely to admit that it is just as important to the world that the ragamuffin child of his worthless neighbor should be trained as it is that his own child should be. Until a man sees this he cannot become a worthy democrat nor get a patriotic conception of education; for no man has known the deep meaning of democracy or felt either its obligation or its lift till he has seen this truth clearly."

Now, no man can, without gross inconsistency, avow the foregoing propositions as principles and at the same time oppose the only and necessary means to their realization in practice; also, it must become evident upon any candid examination of the facts that the direct and proper means to secure the benefits of public education in Texas—so much talked about, but as yet so imperfectly attained—is for every school district in the State to levy a local tax.* There is no question of ability involved in this proposal; for its execution would surely pay in money as well as in nobler rewards. The support of schools nowhere depends upon the wealth of the community, but always upon the appreciation of public education. The man who claims that his district is too poor to maintain good public schools is not only mistaken as a matter of fact, but he also perpetuates his own and his neighbor's present poverty; for, although a few rich men may dwell among them, his people, under the conditions of modern life, must remain comparatively poor until his doctrine is abandoned. There are sister States in the Union whose bitter experiences have proved the impoverishing effects of the doctrine that they were too poor to afford good public schools. For years men and wealth steadily flowed from them, until the tide was turned, at a time when they were poor indeed, by instituting that taxation for public education which they had so long fatuously refused. One of these States (they are that ten or dozen which rank still lower than Texas in pro rata expenditure for public schools, referred to in the comparative statistics on page 6 of this report) during twenty years (1870 to 1890) of minimum taxation and of organized effort to induce immigration by advertising "natural resources," lost 241,000 inhabitants, as the excess of emigration over 52,000 immigrants. In the source from which I have gathered these last statistics, the calculation is made that at the low valuation of \$1,000 for a negro slave in old days, this represented a loss to the State in the twenty years of \$241,000,000 on the score of emigration alone; and the comment is added, "this calculation gives a slight hint of the extravagance of keeping taxes too low." Now all this is changed, and a new era of rapid growth of population and prosperity has dawned for that same State; the old idea that public education was a charity to be doled out as the social purse could afford, has been practically abandoned; and taxation, both State and local, for education and for other useful purposes has risen rapidly, rather as the means than the effect of the reviving prosperity of the last decade.

Of course, every expenditure of public money should be made under strict accounting and rigid economy; but Texas can afford good public schools, and she cannot afford poor public schools.

*The permanent county fund in several sparsely settled counties might for a short time render local taxation unnecessary in them: but the statement is true as a general proposition.

THE STATE PERMANENT SCHOOL FUND.

The duly classified investments of the State permanent school fund are recorded in the annual report of the State Treasurer. He reports a sum total of cash, bonds, notes, and leases (capitalized on a basis of 3 per cent.) on September 1, 1902, of \$40,283,330.84; and estimates an income for the year ending August 31, 1903, of \$1,353,969.57.

For county permanent school funds, see tables of this report.

THE STATE AVAILABLE SCHOOL FUND.

Apportionment for 1902-1903.

The diligence of the State Board of Education in investing the permanent school fund, the new law permitting its investment in the bonds of municipalities and independent school districts, and the increase of taxable values, has made it possible for the Board to declare a per capita basis of apportionment for the year 1902-1903 of \$4.90.

This is the highest point reached since 1893, and has been feasible in spite of an unusual increase in the scholastic census, and of the most conservative estimates of the resources of the fund for the ensuing year. The increase in scholastic population since 1893 has been 154,194, and 20,289 since the last preceding census. That the available fund should more than keep pace with the increasing population proves both administrative skill and fidelity, and the rapid development of wealth in the State; and the coincidence of such conditions with such signs of educational progress as have been previously indicated (still more significant because indicative of enlightened purposes of the people) makes a most encouraging augury of the future.

Year ending August 31,	Pupils <i>within</i> <i>scholastic</i> <i>age</i> , enrolled in public schools.	Scholastic population.	Apportionment.	
			Per capita.	Total.
1894.....	515,528	630,303	\$ 4 50	\$ 2,836,363
1895.....	519,151	693,752	3 50	2,428,132
1896.....	539,084	718,664	3 50	2,515,324
1897.....	536,856	751,899	4 00	3,007,596
1898.....	562,272	777,431	4 00	3,109,724
1899.....	552,503	708,125	4 50	3,186,562
1900.....	578,418	706,546	4 25	3,002,820
1901.....	571,786	729,217	4 75	3,463,780
1902.....	739,573	4 75	3,512,971
1903.....	759,689	4 90	3,722,476

THE SCHOLASTIC CENSUS, AND TRANSFERS.

It is easier to criticise the defects of the present method of apportioning the State available school fund, and of existing statutes governing the transfer of children from one school district to another, than to suggest feasible and effective remedies. In the first place, the requirement of the Constitution (Art. 7, Sec. 5) that "the available school fund herein provided shall be distributed to the several counties according to their scholastic population," seems to the writer to interdict any other basis than *population*, in the plain and direct meaning of the word. There-

fore, those who advocate apportionment according to average school attendance, or school enrollment, would probably have to show good cause for amending the Constitution in this regard, as a preliminary step to the desired legislation. As a matter of course, such good cause might exist; but a question involving amendment of the Constitution peculiarly deserves thorough and impartial examination of its merits, and especially reasons against such a proposition as well as reasons for it demand unprejudiced investigation. On the one hand, the census of the scholastic population costs about \$36,000 a year, while sworn reports of average attendance or enrollment in school would cost practically nothing; also, there can be no dispute of the fact that the present method of apportionment gives a larger proportionate sum for the benefit of the children who actually attend school in certain sections of the State than is received in other sections for the benefit of similar children. In some sections 90 per cent. of the population within school age may attend the public schools; whereas in others, on account of sparse settlement, poverty, ignorance, indifference, or preferred private schools, less than 50 per cent. may attend the public schools.

These are the chief objections to the present method that would be removed by apportioning the State fund according to actual school attendance. As to the first, the expense of \$36,000 a year should be considered in its proper perspective. Of course, there is no excuse for wasting one dollar, no matter what the magnitude of an enterprise, but the proper disbursement of such a sum as \$3,722,476.10 (the State apportionment for the current year) might justly warrant such an expense as \$36,000; and it would be a pertinent consideration to estimate the increase in length of school term that could be secured by adopting a method of apportionment that would obviate this expense. The year ending August 31, 1901, is the latest upon which full statistics are available at the present writing: in that year an expenditure of \$5,628,240 maintained an average public school term of 110 days, and \$36,000 would, therefore, maintain the public schools of the State about seven-tenths of one day. In regard to the second ground of objection, a critical analysis of the effect upon the schools of the best developed sections of the State (where local school taxes are generally levied) of dividing among them the money that would be lost by those sections where a smaller part of the population attend school, would reveal a similar perspective—that is to say, the more flourishing and progressive regions would gain something like a couple of days in the length of their school terms, and the weakest districts would lose one-half of their present terms.

The administration of a State's work of education is an enterprise as vast as it is important, and requires for its right guidance comprehensive views and freedom from local prejudices. Its theory and motive, moreover, are wholly independent of the degree to which the individual recipient of its benefactions has directly supplied the means therefor. The child of the payer of large taxes has no more rights in the public schools than the child of the poor man; nor is there any injustice in this condition, for no fact has been more thoroughly proved than that the direct pecuniary returns to the rich man, caused by the general development of the community, more than compensate him for the school taxes he has paid. One might as reasonably claim favor in the courts on the ground that he helped to pay for them, when it is the equal justice

between man and man, maintained by the law, that has enabled him to win and keep his wealth. The analogy is not strained when the same principle is applied to individual sections of one State, instead of to personal individuals. Texas is, and should ever remain, a unit; the interest of one part is the interest of the whole, and reasons of high wisdom and justice can be advanced in support of the theory that apportionments the school fund of the State in proportion to the number of children in each district, regardless of what part of them presently take advantage of the opportunities offered; for, in the first place, the State apportionment suffices for only the beginning or foundation of schools that ought to be developed to full efficiency and usefulness by local taxation, and if the people of any section do not appreciate the advantages offered by the schools sufficiently to send more than half of their children to those now offered to them, it would seem a doubtful policy to withdraw from them half of the State's apportionment. The natural consequence of such a policy would seem to be to postpone the uplifting of such communities; and the benefit to communities already advanced to a higher plane of intelligence and prosperity would be quite insignificant.

In view of the considerations thus suggested, I cannot see valid grounds for recommending any radical change in the present method of apportioning the State school fund. While seeing clearly the cumbrous means and the imperfect effects of the present plan, I confess inability to devise a less objectionable and practicable plan.

The Practical Remedy for Incidental Abuses.

It should be pointed out in this connection that various abuses which have been associated in public discussion with the method of apportionment by scholastic census, are defiance of existing law. The remedy for these abuses (some of which are indeed flagrant) is plain and simple. I am not unmindful of the practical difficulty of overcoming the suspicions and securing the attention of the Legislature in such a proposal; but my duty is clear and I submit the following recommendation upon its own obvious merits:

If experience has proved that local officers, whether from lack of time, neglect, or defiance of duty, fail to execute the law in the application of the funds apportioned by the State, the need of the services of some inspector of school affairs, directly responsible to the State, is apparent. Such officers have been found necessary in many States. So far as this one matter of the application of the State apportionments in accordance with law is concerned, it would make no difference whether the inspector suggested were attached to the Department of the Attorney General or to the Department of Education; but inasmuch as such an inspector, as a clerk in the latter, could be unlimitedly serviceable in other ways connected with the expanding school system, I do not hesitate to say that he would be more useful if attached to the last named department of the State government. Under such a plan the Department of the Attorney General need not be burdened with new duties; but in any event, and especially if the foregoing recommendation should not be adopted by the Legislature, it would seem expedient that it should be made the express duty of the Attorney General to take appropriate action in matters involving unlawful conduct of the affairs of the State school system, when the State Superintendent of Public Instruction officially reports to him that

a county attorney has refused or neglected to take such action. I repeat that it makes no difference in the practical problem whether the local disorders be occasioned by overpressure of other duties, incompetency, indifference, or willful defiance of law; the result is the same. I desire to state, however, that in my opinion the last mentioned cause is only very exceptionally the true explanation of the facts; and that I believe the great majority of the subordinate school officers of the State, and the majority of the county officials who are charged with duties concerning the public school system, would warmly welcome the assistance that they would receive from an advisory inspector of public schools.

If in the wisdom of the Legislature, neither of the foregoing suggestions be deemed worthy of adoption, then I respectfully report, as the proved experience of the Department of Education, that the State must rest supinely satisfied with the unlawful and injurious conditions reported in the last preceding biennial report of this office, with some others hereinbefore or hereinafter mentioned (see in particular p. 18g of this report), and with many more that are matters of too great detail or too indefinite to be reported specifically. In some of the matters referred to the State Superintendent is now legally powerless, and in others it is a sheer physical impossibility for him, or any clerk in his office, to render the needed service.

Transfers.

It is probable that a poll of the county superintendents and ex-officio county superintendents would reveal a consensus that the most troublesome and perplexing of their duties is the "transference" of children from one school district to another. The worst of these troubles and perplexities can be obviated easily, and the remainder would be found to be useful and not disorganizing.

Article 3982, R. S., is the statute governing transfers. It reads:

"Any child lawfully enrolled in any district or independent district may be transferred to the enrollment of any other district or independent district in the same county, upon the written application of the parent or guardian or person having the lawful control of such child, filed with the county superintendent, at any time before the apportionment of the school fund by the county superintendent or county judge of any scholastic year, but not afterwards; and no child shall be transferred more than once. Upon the transfer of any child its portion of the school fund shall follow and be paid over to the district or independent district to which such child is transferred; *provided*, no transfers shall be made after the trustees have employed a teacher."

State Superintendents and the State Board of Education have long held in appeal cases that this statute vested an undefined discretion in county superintendents (not, of course, an arbitrary but a legal discretion, subject to review by higher authority), and the writer in deciding numerous cases appealed to him has sought to set up the criterion of *bona fides* as the characteristic of the "application" requisite for lawful efficiency. But an almost incredible amount of turmoil and litigation arises under the existing statutes; for many county superintendents have not understood that they have any discretion in granting transfers applied for, and the pernicious notion seems to prevail widely that the State somehow attaches to each child a certain sum of money, leaving it to the whim of the parent to allot the same to any district in his county

that he may elect, regardless of any *bona fide* intention to send the child to any public school in the district chosen. Favor, malice, and even fraud, have been manifest motives in various cases appealed to the State Superintendent from the decisions of county superintendents who have rightly refused to grant the transfers applied for under such conditions.

I, therefore, submit the recommendation that the above quoted statute be amended so as to require "the written application" to contain a sworn statement of a *bona fide* intention of either a removal of residence to the district to which the transfer is desired, or of actually sending the child named to a public school in such district. I am aware that local controversies might still cause troublesome transfers in spite of such a law; but I know of no panacea for the evil consequences of foolish passions. On the other hand, all gross abuses would surely be stopped, and no legitimate privilege of free choice or convenience would be interfered with.

In this connection I beg to state that I can see no good reason for not relaxing the absolute prohibition of transfers across county lines sufficiently to permit them between adjacent districts in different counties; and I know that the absolute prohibition works so much practical inconvenience that the difficulties are often adjusted by mutual consent to a transfer of school funds not warranted by law. Of course, without the amendment restricting all transfers, the removal of any present restriction might well be opposed by the county superintendents who experience the annoyances and witness the abuses of the law as it stands; but after that amendment no bad effects need be feared from recognizing the fact that neighborhoods are not always adjusted to county lines.

JOINT HIGH SCHOOLS.

The present transfer law permits the institution of what have been called rather inaptly "county high schools"; but such enterprises could easily be facilitated by a slight modification of the law governing transfers. In some counties, or parts of counties, there is no convenient district (common or independent) that maintains a high school to which the more advanced pupils could be transferred from surrounding regions; and in such cases it is thoroughly desirable that the co-operation of several districts in a joint school for their older children should be facilitated. It would seem an inexpedient complication to provide other trustees for such a school than those of the district in which it may be located; but it would be well to provide for transfers direct to such a joint high school, and for keeping separate the particular fund of that school. Also, it would be well to provide that the boards of trustees of the common school districts designated by the county superintendent as most immediately interested in such joint high school should each year, immediately after the apportionment of State and county fund to the respective districts by the county superintendent meet, or confer (in writing), through the county superintendent, and determine the per capita amount for the ensuing year to be transferred from the fund of the appropriate district to the fund of the joint high school, on account of any pupil within school age who attends the school.

I regard these simple provisions as covering all legislation that is needed to facilitate the untrammelled development of the joint high school plan.

THE REAL HARMONY BETWEEN THE LAW AND APPROPRIATE BUSINESS
METHODS IN THE MANAGEMENT OF THE INTERNAL AFFAIRS
OF A SCHOOL DISTRICT; AND MISCONCEPTIONS THAT
HAVE LED TO MISMANAGEMENT.

In this connection—though rather as a digression in the interest of school trustees and superintendents and teachers, than as pertaining to a report to superior authority—it may be serviceable to add some comments upon the practical administration of the internal affairs of school districts, because misapprehensions of the wise provisions of the law have led to widespread mismanagement.

The joint high school, which has just been considered, would prove serviceable in thinly settled sections, and wherever the mistake of fixing a separate district for each little school has been made; but in well settled and well districted sections, each district might easily have at least one high school. In such sections there are usually from six to eighteen schools in one district, and it is a significant explanation (throwing side-lights upon various problems) to point out why it is that concentration of the older pupils has not been regularly practiced under such favorable conditions. In some instances there is one genuine difficulty, namely, distance; but the main obstacles have been lack of organization, misapprehensions of the law on the part of county superintendents and district trustees, and (often as direct consequences of the former causes) sheer lack of pupils advanced beyond the stages of the elementary schools. So little organized are many school districts that their inhabitants have been practically unaware of their existence, and trustees have so misconceived the system of the State's public schools that they regard each school (or rather school house) as an independent unit. Such a board of trustees will every year solemnly make a per capita "apportionment"* of the fund of the district to its respective schools according to the census enumeration of children resident on territory traditionally allotted to each school house. One school may be diligently attended by all the pupils assigned it, and another may be attended by only a small fraction of its nominal assignment (because of the proximity of some preferred private school or the indifference of parents or other contingencies that will easily suggest themselves); the former may justify and require the employment of more than one teacher, the latter may hardly justify continuance at all, even on the most economical basis, or could be more profitably merged with one or more other schools of the district. In such methods of managing the affairs of a school district the law is ignored, and common sense is immolated to a very fetish of *per capita* distribution. The rations for an army are rightly apportioned to its regiments on a per capita basis; but in the ultimate distribution of the victuals, dinners are not served to absent detachments. Even so the State apportions its fund to the counties on a per capita basis, and the counties apportion in like manner to their respective districts; but this is the last apportionment (per capita or otherwise) known to the law; when the school district is arrived at the ultimate unit of school organization and control is reached. Previous to this terminus, principles of wide and persistent State policy are concerned; but when the district is reached the immediate and temporary exigency, the practical expenditure in detail, is the proper governing principle. It is with the actual conditions of each year that the trustees have to deal. Article 3959, R. S., declares: "School trustees shall determine how many schools shall be maintained in their respective districts, and at what points they shall be located; they shall determine when the schools shall be opened and when closed; they shall contract with teachers and manage and supervise the schools, subject to the rules and regulations of the county and State superintendents." So far as the money placed annually at their disposal is concerned, it makes no difference, either in law or propriety, whether the several teachers occupy rooms under the same roof or far separated houses; it is one fund, one system, one controlling authority. In the best regulated districts there is no set division of the fund of the district among the schools under the charge of the same board of trustees; but teachers are employed and supplies furnished in accordance with intelligent consideration of particular needs and circumstances; in short, "business principles" are applied. If the trustees of a

*Even certain blank forms issued by the State Department of Education may have fostered this injurious error by calling for the amounts "apportioned" to individual schools, instead of asking for the amounts expended on them.

district should prefer to make a set division of the common fund, it is evident that a per capita division could only rarely coincide with the division that would be dictated by intelligent care and supervision of the district as a whole. Good management requires that the attainments, efficiency, and fidelity of the respective teachers be duly recognized, and, as has been said, the children living in the neighborhood of one public school may attend it, while the majority of those living near another may attend some private school, or no school at all.

The same principles apply to the *division* of the fund *apportioned* to a district between its white and colored schools, and are equally supported by law. There would be no sense in the statute providing for an annual agreement between the white and colored trustees if the intent had been to require a per capita division, nor in the following provision that, "should the said boards of trustees fail to agree upon the division of the funds of the district, they shall at once certify their disagreement to the county superintendent, who shall * * * declare the division of the school fund of the district between the white and colored schools therein, endeavoring as far as possible to provide a school term of the same length." As a matter of fact, the one explicit direction of the law could not (in general) be fulfilled were the division made on a per capita basis, by reason of the fact that a larger proportion of the white children enumerated in the census usually attend school, unless, indeed, one teacher is paid for half work the full limit allowed by law, and another *in the same district* is paid half that amount for double work. Such is the actual condition in some school districts. The law of Texas nobly requires that "impartial provision" shall be made for the schools of both races; but impartial does not mean blind or per capita, and if the colored schools of each district be properly (i. e., impartially) supported according to needs of the actual schools, law and equity are both fulfilled, nor can either be fulfilled otherwise.

The census justly enough determines the apportionment to the district: thereupon the individuals who choose may share its benefits; and if all the children enumerated attended school it would immediately become necessary to supplement the State apportionment by local taxation (and, indeed, that is the end aimed at); but meanwhile the average daily attendance is what rightly determines the number of teachers required in a particular school, and at no time should anything but their professional worth and services determine differences in salaries paid different teachers in the same district. Consequently, in the division of the fund of a district between its white and colored schools, as well as in the expenditure of the funds so divided, by either the white or the colored trustees, there is never legal necessity for, and very seldom propriety in a per capita basis for either the said division or the said expenditure.

Furthermore, it is of vital importance that the respective boards of trustees manage the affairs of each district as an organized unit. The effects of disintegrating this ultimate unit are disastrous. One of the chief practical benefits of incorporating as an independent district is the fact that the unity of such districts seems always to be recognized, although there is no external reason why the same should not be true of every school district. The trustees of any common school district may forthwith manage their district upon precisely the same principles that direct the government of the most flourishing independent districts; so far as is concerned the economy of dealing with the direct needs of the various schools instead of parcelling out the fund intrusted to their "*management*" by a blind count of heads, often utterly irrelevant to the actual schools; or so far as are concerned the general benefits of intelligent correlation of the educational forces of the district. In regard to the idea that each little school and its teacher should have its separate district and separate board of trustees, there can be no doubt that its effect has been disintegrating, and it probably remains as the most disorganizing mistake in which our public school system has been involved. The law provides an easy remedy in the simple requirements for consolidating two or more districts. (Sec. 42, School Laws.)

COURSES OF STUDY.

In regard to the details of a course of study for the elementary public schools, valuable service might be rendered by the preparation of an *advisory* course prepared by the State Superintendent; but so exacting have been the conflicting demands upon every moment of my time that

I have not yet been able to undertake the task, the performance of which in a manner that would prove of real and lasting service would require much painstaking labor. Such a course of study, I repeat, should be advisory, not prescribed, for two good reasons: In the first place, it would be far better to allow the State Superintendent's advice to stand upon its merits, lest ill-advised counsels should work damage. (There is no doubt that the more competent a State Superintendent might be to offer valuable suggestions, the less willing he would be to prescribe them absolutely, and it is a tribute to the good sense of the incumbents of the office that the statute which would have empowered them to impose arbitrary prescribed courses of study has never been acted upon.) In the second place, it would be sheerly impossible to prescribe more than the veriest skeleton of a *minimum* course, by reason of the great differences existing in the capacity and relative amount of teaching force, and in the length of school term in different schools; and to force any flat requirement would likely do more harm than good under present conditions. Those who demand a uniform prescribed course are visionary admirers of uniformity for uniformity's sake, who do not concern themselves with existent facts and who imagine that written lucubrations somehow execute themselves if only enacted by a Legislature. Nowhere is clear-headed comprehension of facts and practical conditions more necessary than in the exercise of central authority in the work of the public schools; and although ideals should never be lost sight of in attention to details, patient self-restraint should accommodate to the actual circumstances all attempts to compel the realization of ideals.

Agriculture.

In regard to subjects of study prescribed by law, I respectfully advise against legislation, unless it be to provide for some suitable instruction in subjects relating to agriculture. But I beg to direct especial attention to the force of the word "suitable" in the preceding sentence. Even if it were intrinsically desirable, it would be absurd to demand instruction in technical agriculture on the part of the available teachers; but there are safe and feasible means for giving much simple yet valuable instruction concerning the life and characteristics of the "tamed" plants and the forces of nature, which constitute the fundamental principles of intelligent agriculture, and are equally well adapted to the general aim of education. We are approaching an era of great development of the rural schools and there is especial need that all initial steps be taken carefully and on safe ground. Statesmen and teachers of broad sympathy, sound culture, tact, and strong patience and grasp of details, have one of the great opportunities of the new century in rightly directing the forces affecting the country child that have already been awakened in public interest; but legislators here especially need to be on guard against hair-brained schemes of enthusiasts. Zeal is a noble and indispensable agency in all great reforms, but zeal without knowledge works folly and defeats its own purposes.

Manual Training.

On July 27, 1901, the State Superintendent issued a circular discussing and properly separating the distinct questions of "Manual Training in the Regular Schools, and Industrial Training or Trade Schools."

As there stated, "I regard manual training not as a rival, but as a help to academic studies. I believe the effect on character to be bracing and profound; that it is a natural stimulus to the self-activity which is the aim of the whole educational regimen; that power is developed by expedients not otherwise available (wood-turning requires boldness and foresight, forge work regulation and reserve of power, and so on to the activities especially useful to girls); that the intellect and the artistic sense are duly stimulated and have full play; and that interest is legitimately secured and healthfully maintained." I endeavored to show the feasibility of installing useful manual training departments in districts in which the schools were properly supported by local taxation; that the expense necessary for an efficient beginning was less than usually supposed; and that future developments might safely be left to take care of themselves. I suggested, also, that attention should be given at the same time to organizing, and correllating with manual training the perfunctory use now made of singing and drawing. I am convinced that a means for uplifting and brightening social and individual life in this commonwealth was indicated in that suggestion. The dearth of vocal music among us and among our children is as sad for the present as it is ominous for the future; and the stupid tasks put upon children in jangling upon pianos only makes the situation worse so far as the true pleasures and benefits of music are concerned. The questions of manual training (including drawing) and song in the public schools will appear more interesting and more important the more they are investigated.

I recommend, therefore, that the Legislature authorize the State Board of Education to duplicate by an appropriation from the State any amount up to a fixed sum (e. g., \$500 or \$1,000) that had been raised by a school district for the special purpose of establishing an equipment for instruction in manual training and in addition to previous local support of the schools, provided the State Superintendent recommends, after thorough investigation, that the conditions for right maintenance and use of the said equipment are presently satisfactory and promising for the future, and provided the county superintendent reports that no other (possibly preferable) application is pending from the same county. It might further be provided, if deemed advisable, that such aid from the State should be applied not more than once in the same county. It would seem better in this matter to draw upon general revenue not otherwise appropriated; but it may be pointed out that there was an unexpended cash balance on September 1, 1901, from the available school fund of the preceding year of \$202,690.22, as compared with \$33,714 for the balance estimated at the beginning of the year when the apportionment was made; and that at least equally conservative estimates place the balance at the close of the current year at \$67,183, which seems likely to be increased in actual experience in even greater ratio than was the last preceding estimate.

Such a policy would effect the needed stimulation to the general introduction of the valuable methods of instruction in question; and it would be greatly reinforced by the equipment of the State normal schools for the preparation of teachers competent to give skillful instruction in manual exercises.

The State Orphans' Home should be treated as a distinct proposition and forthwith equipped for the best instruction in manual training, suit-

ably adapted to the respective sexes and to the special conditions of that institution.

SCHOOL LIBRARIES.

Plans similar to that here recommended for stimulating the schools to equip themselves for manual training have been adopted in various States in order to lead them to provide themselves with school libraries, with results that prove the full ripeness of the times for the general uplift that immediately follows the right use of a well-selected school library. I consider some such plan infinitely preferable to the travelling-library plan, as a method of State assistance. The travelling-library plan is far more costly, and in my judgment far less efficacious toward the ultimate aim of the general policy, which is to stimulate appreciation of the utilities and benefits of good school libraries and thereby lead each locality to provide such libraries for its schools. I, therefore, recommend that the State Board of Education be authorized to supplement out of funds provided as the Legislature may deem best (see the last preceding paragraphs) duly approved local initiatives, under some such regulation as the following: (1) All incorporated "cities or towns" to be excluded. (2) The assistance shall not be available in the same county for schools of common school districts enrolling more than ten per cent. of the school enrollment in such districts for the entire county, nor for schools of independent districts enrolling more than ten per cent. of the enrollment in such districts of the county, provided that it may be available for at least one district of each character in any county, regardless of the percentage of enrollment, and provided that not more than one school in any district shall be aided. (3) The assistance shall in no case be available except upon deposit with the State Board of Education of a sum of money provided by the district applying in amount not less than ten dollars, and furnished by local contribution, proceeds of school entertainments, or some such means. (4) Upon receipt of such deposit the State Board may add an equal amount, not to exceed some small limit (say \$50), and purchase books for the school in question to the amount of the joint sum, the books to be selected by the trustees of the district applying acting by and with the advice of one or more teachers. (5) A list of books from which such selection may be made shall be prepared by the State Text-Book Board and published with prices duly contracted for with the publishers, or as announced by publishers in cases where no contract is made. (6) The district receiving the books must pay all transportation charges. (7) In no case shall the Board recognize an application unless thoroughly satisfied that the books will be safely protected from loss, and carefully preserved in some form of book-case that can be closed against dust and moisture.

I regret that I cannot at the present writing give an accurate account of the experience with somewhat similar plans in other States. The experience of North Carolina has been particularly remarkable and thoroughly encouraging. I think the State assistance there was restricted to one school in each county; but in some counties an expenditure by the State of only ten dollars was sufficient to lead nearly every school in the county to provide itself with a little library without any assistance. This fact "speaks volumes."

While recommending some such plan to the State I would not be misunderstood, as condemning the travelling-library plan for pioneer work

on the part of library associations, for whom I regard it as the best and most practicable plan.

TEXT-BOOKS.

Experience has proved the present text-book law to be of good effect. It is the best law of its class that I know of. Desirable changes are few and affect only minor points. The economies secured to the people, and the approximate uniformity (which is all that is possible without uniform support) secured to the elementary schools are the two substantial benefits gained through the present law, and they far outweigh all objections. I, therefore, heartily recommend the substantial re-enactment of the present text-book law.

The chief points of modification that deserve consideration are possible improvements in the composition of the State Text-Book Board, and the withdrawal of the exemption from cities of over 10,000 population.

Upon the former point I respectfully offer the suggestion that the new text-book law provide for the selection of the books by a Board composed of such State officers as have a logical connection with the matter and an equal number of men professionally engaged in the State's work of education. I may add that a board composed of the Governor, Attorney General, State Superintendent of Public Instruction, and the principals of the three State normal schools would be more efficient than a larger board; and if thus constituted by law, the strife and suspicions incidental to appointments for such a purpose would be avoided.

In regard to the much-mooted question of applying the law to the large cities, although it is plain to any calm and well-informed observer that it is not a matter of much importance to the people at large, it may possibly become a question needing especially calm, impartial, and careful consideration. In the first place the majority of the dozen cities concerned already use a great part of the books adopted by the State, and there seem many indications that they have lost much of the distrust they once felt in regard to a uniform text-book law in the abstract. It is hard to understand how any one could fail to see the grounds of those fears, before a law with wise and temperate provisions was assured. Suppose, for instance, that the law had failed to provide that boards of trustees might add additional subjects of study and adopt supplementary books, if used nowise to the exclusion of the books of the State adoption, which latter must always be used in good faith; is it not plain that such a mistake would have prescribed a Procrustean bed upon which every school in the land should be lopped or stretched to the same stature? Ought the course of study in the schools of a community which taxes itself to provide a full corps of teachers and good equipment of libraries and apparatus be compelled to conform to such a course as alone is possible where one young woman strives to teach forty to sixty pupils of all ages and various stages of advancement, giving commonly ten-minute periods to many classes, all in a shanty bare of the least equipment for helping and economizing the work of teaching? Where there is not approximate uniformity of support it would be absurd to prescribe by law more than a minimum course of study; and any attempt to do so could only result in a compromise that would work damage both ways; the weaker schools would be burdened with excessive exactions under which the people would be compelled to buy superfluous text-books, while the stronger schools

would be prohibited from profiting by their advantages.* But experience has proved the wisdom of our Legislature in this matter, and the confidence born of that experience may disarm serious opposition to the universal application of a law framed in accordance with the demand of conservative public opinion as recently voiced in the platform of the dominant political party of the State. If the event should prove otherwise, I can only record my opinion that no interest of the people or of the schools would be impaired by recognizing to some extent a right of local choice based upon local support. If, for instance, an independent school district pays by local taxation *more* than half of the current cost of maintaining its schools, what harm could result from allowing it the privilege of choosing half of the text-books for its schools, in case the cities should protest against trusting entirely to the good judgment of the State Text-Book Board? If the books adopted by the State be worthy and cheap it might be depended upon that they would seldom be challenged under such a privilege.

Mental Arithmetic and Subject-Matter Relating to Agriculture.

It is likely that two new subjects of study may come up for legislative discussion in connection with the text-book law, namely, "mental arithmetic," and instruction in subject-matter relating to agriculture. As for the first, I recommend the continuance of the present status—the subject prescribed, but no text-book required—with the suggestion that the Text-Book Board might be required to adopt a hand book to be used by teachers in the public schools in teaching the subject. My reasons for this recommendation are threefold: (1) Such a provision would secure actual instruction in those valuable exercises, now often ignored in spite of the law. (2) To require pupils to purchase a text-book in "mental arithmetic" would increase the cost of the prescribed texts. (3) From the very nature of the subject no text-book is needed in the hands of the pupil, however helpful one might be in the hands of the teacher in the way of suggesting suitable problems and securing an orderly progress of the exercises. If one will reflect upon the nature of the exercises called "mental arithmetic," it will appear that no books beyond the regular arithmetics are necessary for the pupils. "Mental arithmetic" simply means calculations without the aid of written or printed memoranda of successive steps in the numerical operations required; and if the teacher were provided with abundant and well-ordered questions it is not easy to see the need of any book for the pupil. Furthermore, the exercise of powers of attention and grasp of thought in the necessity of retaining the terms of the question without the aid of written or printed record, may well be considered as a part of the discipline even more valuable than the calculating "in the head," as the phrase goes. On the last

*Beyond the elementary schools the proposition would be utterly impracticable under present conditions in Texas, where the high schools are only beginning to attain any actual uniformity of teaching force and equipment, upon which uniform requirements might be imposed by law; in some high schools the pupils are profitably studying books and methods beyond the attainments of the teachers of the same subjects in other "high schools." Our schools are constantly improving, and we may trust that the time has come for notable advances throughout the whole system; but we must grow genuinely by vital developments, not by building false theories upon ignored facts.

ground alone I would advise against adopting a pupil's text-book in "mental arithmetic."

I offer the same recommendation in regard to the teaching of subjects relating to agriculture (if such should be prescribed in the course of study), though with less confidence, and perhaps partly because I do not know any one book or two books that would answer the purpose. It is my duty, however, to state that if such subject of study be prescribed it will not actually be taught in any general and systematic way unless some teachers' hand-books be adopted. The matter will be new to the vast majority of teachers (as to the majority of other persons, including farmers) and it would be far better not to prescribe it at all than to leave it practically unprovided for. As I have said it is entirely feasible to secure valuable teaching concerning the tame plants and the forces of nature that constitute the fundamental principles of agriculture, and it is, indeed, regrettable that so many of us know so little of these things that lie so close to us; but it would be foolish to suppose that the benefits of serviceable instruction in such matters can be provided throughout a vast commonwealth such as Texas without any expense, and the undertaking had better be postponed to a day when our ideas become more nearly commensurate with our area and general good fortunes, if the State is not ready now to undertake the necessary expense. I believe that unless some system of distributing through the local superintendents the needed hand-books, by which the labors of the teachers could be directed along intelligent lines, any law prescribing the subject of study would be a contemptible failure.

Opinions of County and Independent District Superintendents.

On September 15, 1902, I addressed the following communication to every school superintendent in the State:

"In view of the probability that the duty will soon devolve upon a State Text-Book Board of making a new selection of text-books for use in the elementary schools, I desire to give that board the benefit of an expression of the opinions of the county superintendents and the superintendents of independent districts upon the points submitted on the attached return post card. Replies to be available for incorporation in my biennial report, must be made very nearly by return mail. The experience of the last few years should have prepared every school superintendent in the State to answer the interrogatories thus submitted without need for further investigation, and I beg the favor of a prompt reply."

Of the 226 county and 346 independent district superintendents addressed, I received prompt replies from 100 county superintendents and 221 independent district superintendents—a remarkably large proportion. On the return card was printed the following:

"If in your judgment the interests of the public schools render necessary a change in any particular book of the last State adoption, please write the word 'change' opposite the name of the book; if you desire to recommend that any book be retained, write the word 'keep'; and if you wish to recommend that any book of the last adoption be given *no advantage* on that account make *no comment* in the space opposite its name in the following list."

The opinions of the 321 superintendents who replied are here tabulated:

		Keep.	Change.	Give no Advantage.

REVISION OF STATUTORY LAWS.

The *system* of the public schools of Texas is a remarkably good one, possessing the paramount virtue of adaptability and inherent capacity of developing to suit the changing conditions of a developing environment. Any radical reconstruction would seem a profound mistake. The relative powers and responsibilities of the various school officers are admirably balanced and adjusted, and this feature constitutes the very frame-work of a school system. Revolutionary innovations should be guarded against—undue centralization of authority, for instance, such as prevails in some States and is sometimes advocated with us. But the time

has come when the proper steps for a thorough revision and simplification of the mass of statutes that have accumulated upon the subject of the public common schools can be delayed no longer without hampering the work in many of its practical phases.

I, therefore, repeat most earnestly the recommendation of predecessors in office to the effect that the Legislature authorize the Governor to appoint a suitable committee upon whom should be enjoined the duty of submitting to the next following regular session a report comprising a unified system of school laws.

The existing tangle of statutes is notoriously obscure and inconsistent, and it is impracticable for any committee of the Legislature to submit such a revision as is needed within the brief period of a current session. Only minor, not radical, changes should be incorporated in the redaction made by such a committee; and their work should consist chiefly in simplifying clumsy provisions, and in harmonizing in clear and brief form countless *unintentional* inconsistencies. Some of the most troublesome features of the present laws have no purpose whatever, the inconsistencies of new with previous requirements having frequently been the result of mere hurry and lack of acquaintance with existing statutes. Only changes incidental to such a simplification, and minor regulations should be incorporated directly in the report that would be considered by the Legislature as a substitute for the long chaos of statutes now known as the school laws; and all radical changes involving any such question as, for example, the means and basis of making the State apportionment, should be left to the direct initiative of the Legislature.

Special Amendments.

Meanwhile a few amendments could well be made that would much facilitate right development of the public schools. Some of the most important of these may be briefly indicated in this connection; others have already been pointed out in connection with particular topics.

1. An act submitting "a constitutional amendment making the appointment of trustees of our schools, colleges, and University for terms of two, four, six, and eight years."* (Democratic platform.)

2. The legal distinction between "cities and towns" and "towns and villages," useful and important in many regards, is misapplied in permitting the latter and forbidding the former to add surrounding territory in an incorporation as an independent school district. The restriction upon the former could easily be removed, and the effects of the change would quickly prove advantageous.

3. The reports required by law of county and independent district superintendents and treasurers (numbering now 1144 officers) have been made to the State Superintendent more promptly during the last year than ever before; but delays and even total delinquencies in this matter indicate a needed amendment to the law. The existing statutes purporting to fix penalties for non-performance of such duties are for obvious reasons a dead letter. I can suggest no efficient remedy other than that

*Along with this advance movement might be mentioned the repeal of the indirect—and perhaps unintentional—provision of the present law, which in effect prohibits trustees from electing a superintendent for more than one year, unless it be deemed best to leave such modification to the general revision.

submitted in the last biennial report of this department, to the effect that the State Superintendent shall be required to withhold from any county or independent district amounts due from the State apportionment subsequently to the date fixed by law for the filing of reports for the district or county, until acceptable reports have been received. This plan is followed in many States, and by means of it prompt reports would be secured. The efficiency of the schools would not be impaired, for the withholding of a monthly payment would always insure immediate attention to the neglected duties, because of the urgent demands that would be made by those who under the present law would never think of prosecuting the delinquent officer for the "misdemeanor." No public or private enterprise can afford to pay out great sums of money without exacting due reports both of the conditions and amounts of disbursement; and, furthermore, vital statistics are withheld, which are essential to intelligent supervision.

4. Several slight amendments are needed to make effective the purposes of the present laws concerning fraudulent uses of the examination questions for teachers' certificates. It is not expedient to enter here into details; but it is proper to report the fact that the extent to which negro applicants employ fraudulent means presents a pitiable condition. This State divides its school funds between white and negro schools with maganimous impartiality; but if no way can be devised to stop the growing evil here referred to, the benign purposes of the State toward its negro citizens will be miserably defeated.

It would require for some time the undivided services of a thoroughly efficient man to attend properly to the correspondence received by the State Superintendent upon this one subject, and to the investigations called for and truly required. The State Superintendent is frequently reproached by honest negro teachers for not stopping fraudulent practices of which he is known to be cognizant; but he can do no more than here report his impotence under the law and the means placed at his command, to render the needed and demanded services.

I beg, therefore, to refer again in this connection to the recommendation submitted on page 12 of this report; and to promise that if that suggestion be adopted the fraudulent traffic will be stopped, and that, if possible, the three or four traitorous sources of the detestible business will be brought to justice.

5. The effect of Article 3946, Revised Statutes, is to prohibit absolutely the employment of an assistant teacher in any school until the average daily attendance reaches fifty-one pupils. This almost incredible statute should be repealed; for in its nearly 200 words it adds nothing to the law but the obnoxious restriction, all its solemnly granted privileges being elsewhere conferred, e. g.: "In districts that levy a special school tax the trustees shall have the right to * * * have the schools taught longer than six months if it is deemed advisable." Such provisions may have an historical interest; but their spirit is now happily obsolete and they are superfluous in view of other and more general statutes.

6. It would seem that patriotism might induce the treasurers of independent school districts to discharge the duties of their office without commission, and I think that if the law requiring the treasurer to be a member of the board of trustees were amended so that either a member of the board or other suitable person might be appointed by the trustees as treasurer, that there would nowhere arise any difficulty in securing

efficient discharge of the duties of the office without the present commission of one per cent. on all receipts.

The importance of the matter has been somewhat exaggerated in popular discussions, and I, therefore, state the following facts:

For the year ending August 31, 1901, the total amount paid all treasurers was \$33,841. Of this amount \$24,683 was paid county treasurers, and \$9,158 was paid the treasurers of independent school districts. Also, the limit fixed by the fee bill prevents the treasurers of the wealthier counties from receiving any commission on account of the school funds; and the treasurers of some independent districts decline the commission allowed by law, and others donate it to some special school purpose, such as the school library.

TEACHERS' EXAMINATIONS, COUNTY INSTITUTES, AND SUMMER NORMAL INSTITUTES.

In regard to the examinations for teachers' certificates that the State Superintendent is required to prepare, I beg to say that I have felt the responsibility to be of a sort that ought not to be delegated to another, and I have endured the toil of preparing eight general and two summer normal examinations a year, six of the ten being respectively in seventeen, and four in twenty-four different subjects, covering all grades of certificates. I have tried diligently to make the questions in every subject a fair test of a general knowledge and ability in its subject matter, such as ought to be retained by anyone who had ever truly comprehended its elementary principles; and it is not unreasonable to believe that the result has fairly fulfilled that purpose, from the very fact that the questions have had their source in the general knowledge retained by one mind, and have in no instance been drawn from the special interests engaging the attention of a man immediately occupied with the facts and problems of any particular subject. Facts corroborate this theory, because during the year ending August 31, 1902, 1096 certificates were recommended by identically the same State Board of Examiners that recommended 1069 the preceding year, although nearly every member of the board has stated that he has elevated the general standards of appraising the answers of applicants for certificates. Furthermore, there was a slightly greater proportion of successful summer normal applicants this year than the previous year. These statements are made in view of the circumstance that loud demands (far from representation, however, of the teachers of Texas) have been made that the examining questions should be confined to the text-books adopted by the State. Upon this point I shall make only two comments: the first, in mentioning the fact that the State text-books are designed for the use of children during the first six years of systematic instruction; the second, in stating that the purpose of the examinations is not to afford an easy way for individuals to secure bread-winning occupation, but solely in order to protect the children who are being educated under the State's management and control from being taught by those ignorant of what they profess to teach. In fact, it is surprising that any one could be found to advance the naked proposition that a teacher does not need to know more than the contents of the text-book put into the hands of the pupils for the purpose of facilitating the teacher's instruction. That I have escaped the mistake of attempting too much, in so far as I have anywise modified the character of the examina-

tions offered by the State, would seem proved by experience, as shown by the proportion of successful applicants; and the explanation that that proportion has not decreased lies, I think, in the fact that there is the minimum risk of accidental failures with such examinations as I have offered.

If one will consider the time required by any attempt to prepare good examinations nearly every month in the year, he would naturally inquire what need dictated such an arrangement. It has not been possible for me to accomplish the task in addition to the exactions of other duties, except by dangerous draughts upon time that ought to be used for sleep. The double obligation of protecting the children and doing considerate justice to the teachers has forbidden the dictation of random questions to a stenographer (or any such means of dispatch), and I confess inability to make a better average than forty-five minutes per subject for the complete printer's copy; fairness requires that the applicant be offered a choice of questions, and professional fidelity demands that the examination should be suggestive of right matter and methods of scholarship. On the other hand, these duties cannot be discharged under the present arrangement without rendering impossible many more important though less mandatory services. Finally, an excessive frequency of examinations is intrinsically an injurious policy: I will not here substantiate this statement with its manifold reasons; but I think it can be demonstrated.

Recommendation.

I therefore recommend urgently that Art. 3973(c), R. S., be amended so as to provide for examinations in every county on the last Friday and following Saturday of only May, August, and November.

These examinations, together with two summer normal examinations, would afford five opportunities a year to applicants for certificates (a super-abundance); and the dates chosen have been carefully considered with reference to the convenience of teachers.

County Institutes.

It has not been possible for the present State Superintendent to prepare an advisory course of study and discussion for the work of county institutes. Good service might be rendered by such an undertaking; but it were better not done at all than done in a superficial or merely perfunctory way.

I know the opposition with which all past proposals to allow teachers to draw salaries without reduction on account of days spent in attendance at teachers' institutes, have been met; but I feel called upon to express my conviction that the present policy of the State in this question is unworthy of her noble characteristics, and is a practical mistake from even the lowest point of view. Though tempted to point out better reasons for a reconsideration of the existing law on this subject, I shall only suggest a glance at the comparative statistics of teachers' salaries shown on page 7 of this report, a candid consideration of which would certainly explain many things to one hitherto unaware of the facts.

Summer Normal Institutes.

The State Superintendent is charged with the duty of prescribing regulations for summer normal institutes; but many grounds of proper dissatisfaction with the results accomplished must remain unavoidable, as long as all practical means of helpful guidance and control are withheld. Nevertheless, they undoubtedly do good service even under the present total lack of support. Organization for still more effective usefulness does not seem practicable, unless the State were to furnish means for paying one member of the faculty of instructors (who should also be the responsible "conductor") at each of a limited number of institutes. The greater part of the necessary cost would still be borne by the attending teacher-students; but so long as the whole burden rests upon the latter it does not seem proper to deny applications for recognition made on the plea that the teachers cannot afford to leave their immediate vicinity. Under such conditions many institutes must be too weak in teaching force and facilities to attain desirable results. If the State appointed and paid the chief instructor at each of a suitably limited number of summer normal institutes, vigorous and highly serviceable instruction could be furnished at a lower fee of admission than is now charged for less valuable service. I think there is no doubt that the benefits reaped by the school children of the State would repay the small outlay a thousandfold; but as I am not willing to definitely recommend in this report any action that is not urgently and immediately needed, the facts in this matter are submitted merely with the comment that, if the suggestion offered should be approved in principle it is hard to see any reason why Texas should wait two or more years to enjoy benefits now so easily attainable. It may be added that the attendance in last summer's institutes largely exceeded that of any previous year, and that the increase over the attendance of the preceding year was far greater than ever before, excepting that of 1899 over 1898.

STATE EDUCATIONAL INSTITUTIONS.

There are nine State educational institutions which are more or less organically connected with the public school system, but which are autonomous and make independent and direct reports. These institutions are the following: The University of Texas; the Agricultural and Mechanical College; the Sam Houston State Normal; the North Texas State Normal; the Prairie View Normal and Industrial School for Colored Teachers; the State Orphan School; the Institute for the Blind; the Institute for the Deaf and Dumb; the Institution for Colored Deaf, Dumb, and Blind. The State has established two other institutions, for which buildings are in course of erection, but which have not yet been organized, namely, the Southwest Texas State Normal, and the Industrial Institute for White Girls.

There are indications on all sides that Texas is rousing to consciousness of her present greatness and vast opportunities; but the State has grown and developed in every way faster than is commonly realized, and almost all of its enterprises have reached a magnitude little anticipated only a few years ago. There is no need for this report to attempt to summarize or supplement the individual reports of the institutions named above; and only a few general considerations will be mentioned.

The State University.

There still survives in some quarters the notion that the public schools and the university are antagonistic claimants upon the fostering care of the State, and patriotic men rise up to champion the common schools in opposition to what they imagine to be conflicting interests of the higher education. In truth no such conflict of interests exists; for besides the function of universities in the general economy of a commonwealth, the State University of Texas is closely and vitally connected with the common schools, and it has fulfilled nobly this one of its functions. The system of our State education is properly conceived in three stages of a unified work—the elementary school, the high school, the university—and no worse affliction could befall the whole than paralysis or derangement at the top. It may be serviceable to mention several simple facts indicating the *relative* cost of this integral part of the State's system of education so far as usual appropriations from the general revenue have been concerned. At the present writing, 1901 is the latest year for which the total amount expended on the public schools has been ascertained: in that year \$5,628,240 was so expended, and \$40,000 was appropriated out of general revenue for the main branch of the university; in the same year the former sum maintained an average public school term of 110 days, and therefore the said appropriation could have extended the term of the public schools less than eleven-fourteenths of one day. As another comparison: if the policy of the State scholarships for the normal schools be continued, that one item will require this year appropriations reaching nearly \$60,000. Such amounts seem large from the standpoint of the last generation; but, as already observed, Texas has grown and developed wonderfully in wealth and population, and the scale of all State enterprises necessarily enlarges *pari passu*.

One of the many direct services of the university to the lower schools is supplying properly prepared high school teachers, and in this connection, I would point out the fact that, under a provision of the present law, one might have received every degree that the university can confer, yet would be prohibited from teaching in any public school of the State unless examined and approved by persons whose legal qualification is a "first grade certificate," such as is obtained every month by pupils just out of high schools and by thousands who have had far less preparation than that. I recommend that all degrees (except in law and medicine) conferred by the Regents of the University of Texas have the immediate force of permanent State certificates.

The Agricultural and Mechanical College.

There is good ground to hope that the Agricultural and Mechanical College is about to enter upon a period of marked development and widened usefulness; and I venture to suggest to that institution the opportuneness at this juncture of what might be called agricultural college extension work,—first in teachers' institutes and normal schools, and later among the boys of the rural schools. The latter could soon be interested in experiments and investigations under directions furnished by the College.

The State Normals.

The needs of the public schools have been shown unmistakably, also that it is the people and not the teachers who must deal with some paramount problems; but it has not yet been sufficiently emphasized that the present time affords a golden opportunity for advance. In this connection, therefore, it may be serviceable to point out the fortunate timeliness, relative to the needed improvement in the resources and equipment of the common school districts, of the initiative recently taken by the State government in the institution of two new normal schools, which will increase the means of supplying properly prepared teachers. Our vast territory has long been too populous for one school of this class to supply the demand for well prepared teachers of even the few districts that have given any attention and support to their schools. The public schools of Texas employ sixteen thousand teachers, and what may be called the "professional life" of the teacher is exceptionally low in this State, necessitating an enormous number of recruits each year. This number must approximate four thousand a year,—more than ten good normal schools could graduate. Among the causes of the short term of the professional life of the public school teacher is the fact that so many young women merely occupy themselves in the business of teaching between high school graduation (hundreds with far less preparation) and marriage; but the prime cause (the cause of that and other proximate causes) is poor remuneration. See the facts on page 7 of this report. Men who develop strength and efficiency are constantly tempted away from the work of teaching, and strongly discouraged from entering upon it. But I believe an awakening is coming along these lines; and as desirable places call for teachers, vigorous and high-minded teachers will find means* to lift themselves rapidly to meet the rising demands of conscientious and intelligent trustees. Experience has proved (what was perfectly plain in advance) that the new normal school instantly filled to its full capacity without diminishing the attendance at the elder institution that had been so endeared to the hearts of thousands; and when the third normal school opens we shall certainly see the same experience repeated. The system will then be provided with means adequate for the present to supply the demand for properly prepared teachers that all good citizens ought to seek to create. It remains for the people of each school district to supplement by local tax the State and county apportionments.

With three newly invigorated and mutually stimulating normal schools, the supply of teachers for the elementary schools will be sufficient to meet the demands of the districts that levy local taxes, and they alone† deserve well prepared teachers. Districts that take no care for their schools will drag along with five-months schools, housed in shanties, and, generally speaking, with incompetent teachers. The whole tendency will gradually compel backward districts to fall into line with the advance, until the common schools of Texas prove by their efficiency and happy prosperity that the step-motherly attitude of the people has been changed to one of true maternal regard.

In regard to the State normal schools, I submit the following recom-

*In several public addresses I have tried to show that the self-improvement here referred to is easier to accomplish than is commonly supposed.

†See foot note on page 9.

mentation: The clauses of the law that authorize these schools to issue teachers' certificates to pupils finishing the work of the first year of the course of study ought to be repealed.

It is the work of the second and third years of the courses of study there offered which properly form the basis of a teacher's certificate; the work of the first year is very elementary, and represents a stage far below that of second rate high schools. Graduates of good high schools commonly complete the third year's work in the normal schools and graduate therefrom *in one year*. This latter fact is nowise criticised, nor am I advocating any extension of the course of study required for graduation; but am simply pointing out that the first year's work merely gets the pupil "into shape" to begin to study for the certificate now given at the end of the second year, or the honorable diploma at the end of the third. Whatever may have been justifiable in the past, no shred of expediency remains to justify today the State certificate referred to.

Industrial Training Schools.

The proper organization of industrial training schools is a problem of social economy which needs to be clearly distinguished from certain educational questions with which it is commonly and dangerously confused, namely, the field of the polytechnic schools, and the interesting question of manual training in the common schools. The sphere of the polytechnic school is chiefly represented in Texas by the Agricultural and Mechanical College; and the recommendations concerning manual training in the common schools have been submitted on page 18 of this report.

Industrial training primarily looks to the teaching of handicrafts, and its great, real problem is concerned with the urgent need in our modern civilization of finding a substitute for the largely discarded system of apprenticeships which was the means employed by our forefathers to an end for which we must now devise some improved means.

Although widely separated as practical problems and in the State's grounds of interest, there are connections between industrial training schools and the true schools, which recommend organic relations and unity of control. This principle may be assumed as universally granted; but it would be preposterous for a State which maintains schools only five or six months in the year to think of dividing their pittance to establish trade schools. Upon any such proposition there can be no disagreement between enlightened educators and statesmen; but as a financier I am of the opinion that the defenders of the schools against half-baked schemes to set up industrial training at the expense of the educational work of the State, have overlooked one fact, wherein lies the solution of this dangerous problem.

I think industrial training can be easily provided where the need for it is urgent, without draining the resources of the schools. In all our cities, where buildings and teachers are duplicated and reduplicated for pupils of the same grade industrial training schools could be instituted at a very small addition to the cost of maintenance. This small additional cost might be assumed by the State in order to encourage city school systems to set apart such of their school buildings as would suffice to begin the practical experiment. This plan would probably benefit the schools proper; for present conditions do not satisfy the needs of those who, either from poverty or choice, will never take the instruction even of the elementary

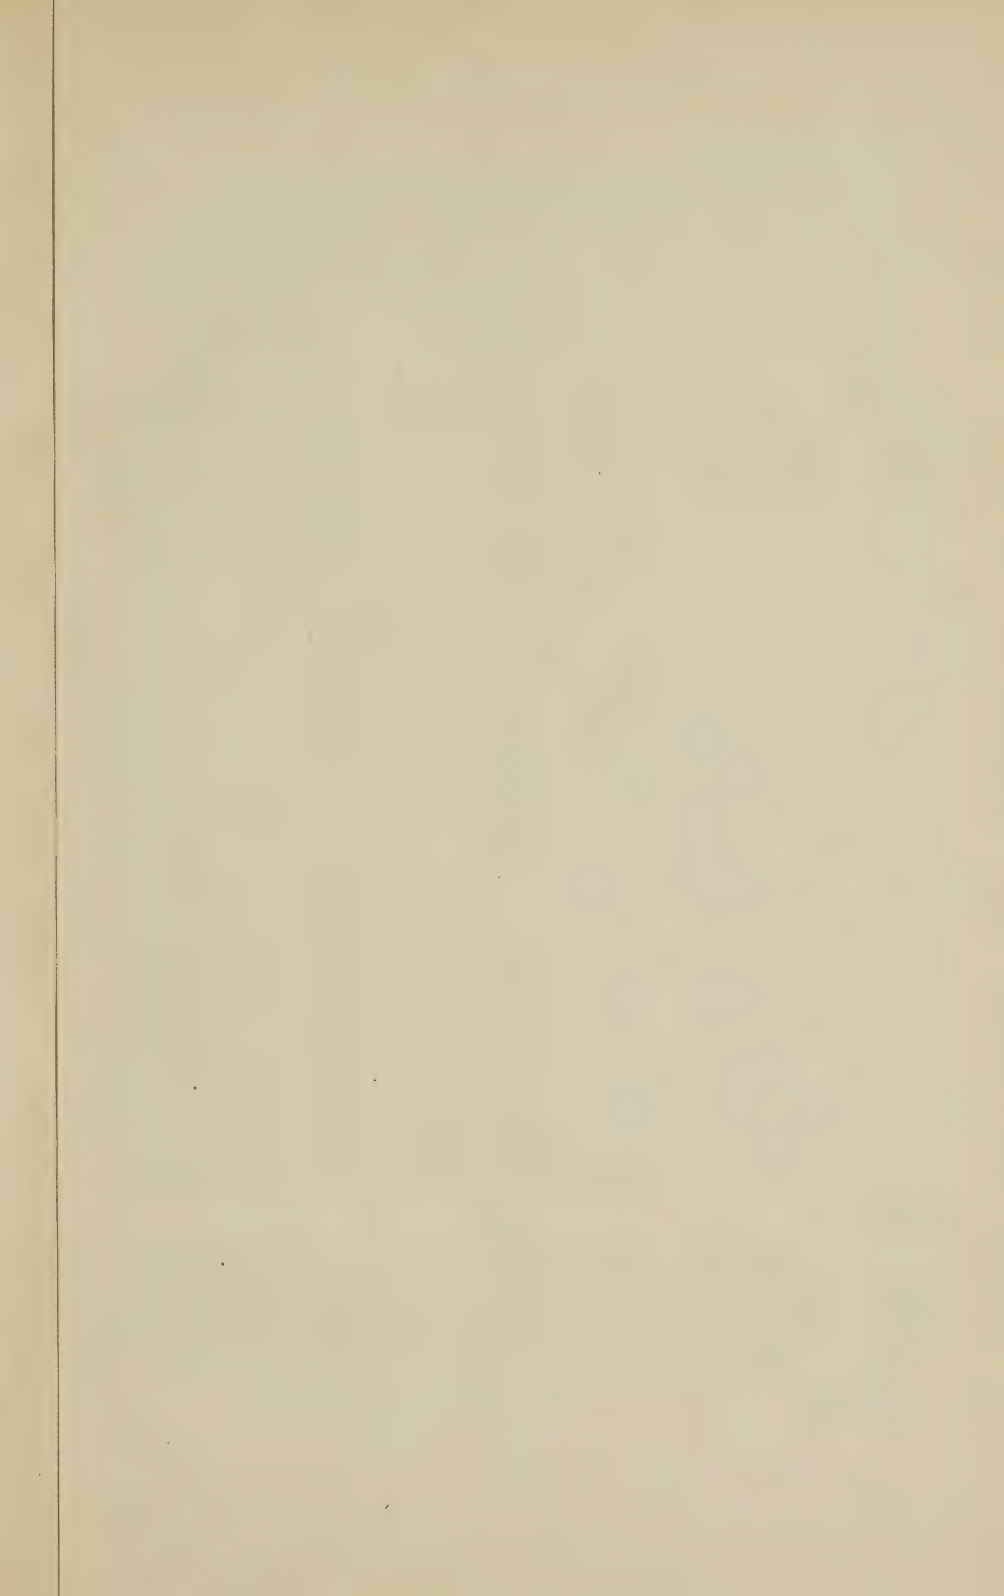

school, or at best drag on for a few years reluctantly and under protest, with little gain to themselves and much harm to the schools. How to render this large number of individuals true service is a difficult and dangerous question; and the industrial training of such children is a subject of vast economic and social importance. Any such movement to be effective must be spontaneous and general, though it may be gradual; sooner or later, and one after another, different school systems could try the experiment. Of course, any undertaking may be mismanaged through ungoverned zeal or other sources of error; but, as I have said, such a method as that proposed could be directed so as to help and not hinder the true schools;* and it would at the same time meet a great need of our civilization by providing a way for training as skilled workers an important part of our people who, under existing conditions, are left to meet this life's struggles almost wholly unaided by the educational and economic systems of the society which must ever depend so largely upon the efficiency, happiness, and virtue of this now neglected part.

In what has been said up to this point, there has been no reference to any plans, general or particular, now engaging public attention, that look to the establishment of any centralized institution or institutions. Such propositions deal with a matter of large importance, and deserve the interest and attention and support of all enlightened citizens; but the matter to which the preceding remarks have been directed is a vastly wider and more fundamental one,—where the former has to do with hundreds of individuals, the latter concerns hundreds of thousands. Nevertheless, although the larger question remains (the question of reaching the thousands of both sexes who can never receive the direction and assistance offered at a central institution), the wise training of a few hundred girls every year in suitable industrial skill is a great and useful enterprise, and the scope of its benefits may well engage the devoted efforts of men and women of great ability. The Industrial Institute for White Girls, already established by the State, seems full of promise. In it are involved both a great opportunity and a great responsibility; for upon its wise organization and proper maintenance may depend developments of further reaching effect than could now be foretold.

PRIVATE AND CHURCH SCHOOLS AND COLLEGES.

No matter how distinct their separate organizations, or how diverse the means and methods employed for the common end, all genuinely educational institutions labor, if they labor aright, in the same great cause. The only right attitude of the representatives of every sphere of this great and varied, but properly and essentially unified work, is one of absolute cordiality and fellowship. As a matter of public interest, I have endeavored to compile statistics of the private and church schools and colleges in the State. The result appears in the table inserted opposite this page. One of the most interesting facts that would appear in a study of these statistics is the ratio of the value of buildings and equipment in these private schools to the number of pupils instructed, as compared with

*I have used the term "true schools" not merely to distinguish them from industrial training schools, but as suitable to their relative importance to the State and to mankind; for important as industrial skill is, intellectual enfranchisement and spiritual enlightenment is of still deeper import—"the life is more than meat and the body is more than raiment."

* Items with an asterisk are from report for 1900.

the like ratio for the public schools. If one made the comparison between all the private institutions, and the public schools outside of independent school districts, he would discover that these private enterprises in that particular do forty times as much for their pupils as the State schools. Of course, the real worth of any school buildings or material equipment depends strictly upon the quality and force of the instructors and the instructed making use of them; but in so far as such resources are utilized with the candor that should characterize all educational work, they approximately measure efficiency.

PEABODY DONATIONS.

For the first of the two years covered by this report, the General Agent of the Peabody Fund sent (through the hands of the State Superintendent of Public Instruction) donations to educational interests in Texas as follows: \$2,000 to the Sam Houston State Normal, \$1,000 to supplement the salary of the principal and \$1,000 to supplement the salaries of members of the faculty; \$300 to Prairie View Colored Normal; and \$1,000 for conductors of summer normal institutes. For the second year, ending August 31, 1902, he sent \$2,000 to the Sam Houston State Normal, to be distributed as before; \$800 to the North Texas State Normal, in supplementation of principal's salary; \$300 to Prairie View Colored Normal, which was transmitted to the directors of that institution to be expended for its best interests under the general rules governing the fund (e. g., not for property of any kind). These donations were made specifically by the trustees of the Peabody Fund, acting through their general agent, Dr. J. L. M. Curry, to whom the State Superintendent gave receipt for each remittance, and at the close of each year sent exact statement of receipts and disbursements. The State Superintendent's relation to these transactions is thoroughly extra-official; his slight and almost perfunctory part is a mere act of courtesy, responsive to a personal request from the General Agent of the Peabody Fund, who might choose (and at times has chosen) some other method of remitting the gratuities of the fund.

Under ordinary circumstances to discuss publicly the wisdom of the policies that have been adopted by the distinguished and faithful trustees of the Peabody Fund would be a breach of good manners, and equally obnoxious to good sense.* But I am constrained by a sense of loyalty to my official obligations to offer such amends as are possible for some extraordinary expressions published in the official report of the recent State Investigating Committee. Desiring to be as brief as possible, I shall not correct in detail the mistakes in fact and in theory to which the said report may have appeared to give official sanction; nor shall those that merely misrepresent the State Superintendents be anywise noticed. The committee's official comments on the policies of the Trustees and General Agent of the Peabody Fund, however, cannot decently be ignored. It will be enough to quote their conclusions: Speaking of the Peabody supplementation of salaries paid by the State, which they deem "a farce well known to those who are acquainted with the facts," they reach the con-

*Of course, advice or suggestions might quite properly be submitted directly to the general agent or to the trustees, for such consideration as they might see fit to give.

clusion: "It cannot aid students, for they receive none of it. So far as the benefit, either to the State or to the cause of education is concerned, it would do as much good to throw it at a bird or give it to a railroad conductor."

It would be the natural impulse of a private citizen of Texas who honors his State and loves her good fame to offer apology both for such thoughts and such language from such a source; but since that cannot be done officially, and since the matter is here noticed on strictly official grounds, I can only publicly assure the honorable Trustees and General Agent of the Peabody Fund that both the purposes and the effect* of their policies in this State are thoroughly and gratefully appreciated by all whose knowledge of the questions involved entitles their opinions to consideration.

For, although it is very true that Texas is able to pay properly the teachers working in her system of public education, the fact remains that in the opinion of such magnanimous friends as the Trustees of the Peabody Fund, she has not yet done so, and also the further fact that the opinion of the said trustees is corroborated by the opinion and practice of the country at large.† The truth is, the chief aim and purpose of this noble benefaction to the Southern States has been to raise the standard of teaching, and (by quietly supplementing at chosen points the insufficient salaries meted out by certain States) to help through periods of financial straits, or lack of appreciation of public education. Surely, this has been an enlightened policy, and gradually States have taken the gentle hints, and the fund has sought other points that needed strengthening. To quote from the published principles adopted by the trustees: "Other things being equal we give the preference to places which will, by their example, exert the widest influence"; and "We aim at the power and efficiency of a limited number of such schools * * * rather than at the multiplication of schools languishing for want of sufficient support." The trustees, knowing the rapidly increasing wealth of Texas, may well have deliberated how much longer their tacit criticism should be offered in this State; but, unless I am much mistaken in my estimate of their mental and moral calibre, it is safe to say that, if they should regard the utterances of the committee referred to as expressive of more than individual thoughtlessness, the only effect would be to prolong the patient suggestion; for, indeed, as a matter of fact, every State in the Union today, not only could afford a well-maintained system of public education, as a financial proposition, but cannot afford a poor system, and *the need* where the public schools are not properly maintained is not money, but intelligent statesmanship.

Such are the principles that have directed the policies of the Peabody Fund, and it is strange that no glimmer of them appeared to the committee when they quoted the following words of Dr. Curry, which might be taken as the very keynote, "the Board sought to stimulate self-exertions in the cause of popular education."

*I do not mean to imply that every detail of past expenditures has represented the best possible expenditure, nor to suggest that no good could be expected from careful reconsideration from year to year of the precise disbursements to be made of the bounties of the fund.

†See statistics of average teachers' salary in the United States on page 7 of this report.

It does not seem worth while to discuss the laws proposed by the committee for governing the Trustees of the Peabody Fund (e. g., that the money "be applied to the payment of board of students"), as such proposals are, if possible, even more supererogatory than the general criticisms. But it is my duty to point out that the supplementation of the salary of the principal of the Sam Houston State Normal Institute is not the surreptitious affair "needing a just rebuke," that it would appear to be to any one who should credit the committee's report. It is necessary only to quote from the minutes of the State Board of Education for July 16, 1881:

"The Secretary of the Board read a communication from Dr. J. Baldwin, signifying his willingness to accept the principalship of said institute, if tendered; thereupon,

"Mr. T. H. Bowman, Secretary of State, nominated Dr. J. Baldwin, of Missouri, for the position of Principal of the Sam Houston Normal Institute, which nomination was seconded by Hon. W. M. Brown, Comptroller, and Dr. Baldwin was duly elected to the position, for the ensuing term at an assured salary of \$2,000 and an additional increase of \$1,000, conditioned upon the receipt of the promised aid from the Peabody Fund."

Similar minutes stand concerning the present incumbent, Prof. H. C. Pritchett, and the entire corps of teachers, and they are repeated from year to year, though usually merely as an inference from the recorded approval of the catalogue. For example, a minute of the State Board for May 6, 1895, reads: "It was ordered that the salary of the principal be paid as heretofore, \$2,000 out of the State and local funds, and \$1,000 out of the Peabody funds; and that the remainder of the Peabody funds be used as a part of the general fund in the payment of assistant teachers."

Of course, such actions of the State Board of Education are construable only as cordial acceptances of *the gifts* of the Peabody Fund, and not as dictations to the trustees of that fund; for the simple reason that dictation is in the very nature of the premises absurd—the trustees being able at any instant to withdraw the aid altogether. No further comment is needed to show the extremity of the mistakes made by the State investigating committee.*

In conclusion, the statement in the committee's report that, if Mr. Pritchett were not willing to continue his services after the enactment of the law recommended by them (to the effect that his salary be reduced by the amount of the Peabody supplement), "others long and wait for his place," may be granted to be a sad fact. It is not disputed that any position can be nominally filled at any salary—the present janitor of the buildings might, no doubt, in consideration of the principal's "elegant dwelling," be induced to accept the office at fifty dollars a month. But to secure good teachers, and above all to secure good administrative officers, two things are immediately necessary: right standards of discrimination on the part of those who select them, and stipends suitable to the value and the importance of the service needed. Practically, the latter is as necessary as the former; but I am unwilling to leave wholly unrecalled that uneconomic view of life (which still survives as the very salt of the

*"The money is sent to the superintendent, who is said to send it to the places designated by the agent with the discretion to use it as they see proper, and when received in these institutions it is very promptly applied to the salaries of teachers."—Report of State Investigating Committee, page 131.

earth) wherein the best human services are too exalted a thing to be measured by the coin of the market. If those who receive such service conceive that they "hire" it, they make a mistake whose effect is to pollute the very well-springs of noble action.

THE OFFICE.

This report will not be prolonged by any attempt even to suggest many of the multitudinous office duties of the Department of Education. It ought to be self-evident that the work here grows with the growth of the State, and that much that has never yet been attempted needs to be done. Correspondence especially increases heavily; but the unusual efficiency of the clerk who is the principal stenographer has enabled the office to conduct the general correspondence promptly, so far as physical means are concerned;* also the law and certificate clerk is available as a stenographer for the State Superintendent in the latter's judicial duties, and he conducts independently the voluminous special correspondence of the certificate desk. The scholastic census has been scrutinized as strictly as possible within the time allowed (one month), that work having the "right of way" during the month of July. The census and statistics clerk also compiles the reports of 572 schools superintendents, and keeps itemized accounts of the State normal schools, and that of the Peabody donations (the last is a trifle not worth mentioning, except to correct a misstatement of fact in the report of the investigating committee). The auditing and apportionment clerk has in charge the apportionment of the available State school fund, also the auditing of 572 treasurers' reports, and a compilation therefrom of the financial statistics. He also renders valuable general service. Some changes have been instituted in the compilation of statistics, which, it is believed, will enhance the value of those furnished by this office after the year ending August 31, 1902. The duties of the blank room and mailing clerk would be tedious even to enumerate. They are expertly discharged. The chief clerk, besides supervising all details, is the correspondence clerk in this department. His energy and good judgment could not be overpraised, and the happy unison of all activities in this office is largely due to his character and ability. He not only does well what he undertakes, but he has the rare discretion of always knowing what part of the day's mail ought to go to the Superintendent's desk, on account of the peculiarly difficult, critical, or responsible nature of the business involved. The services of the porter have been prompt and careful.

With these commendations, far briefer than their merits truly demand, I report, in compliance with the requirements of the Twenty-seventh Legislature, the absences of the above mentioned "employees and the reasons therefor" during the year ending August 31, 1902:

W. C. Hixson, chief clerk: Three days, partly on leave, partly official business; eleven days on leave; twenty days on leave of absence without salary, an acting chief clerk appointed in his stead drew full salary.

C. V. Johnson, law and certificate clerk: Thirteen days on leave (business and sickness), three days on leave (paid for substitute), seven days vacation.

*The limit of possibility for one stenographer, however, will probably soon be reached.

E. B. Carruth, statistics clerk: One day on leave.

Ben E. McCulloch, auditing and apportionment clerk: No absence.

H. P. Bickler, stenographic and filing clerk: Fourteen days vacation.

George S. Dowell, mailing and blank room clerk: One day sickness.

John Burns, porter: Five days vacation.

Two summer clerks: No absences.

It should be added that the full force has worked regularly from 8:30 a. m. to 5:30 p. m.; frequently more than half have worked till six o'clock; and the chief clerk and stenographer have not infrequently worked with the Superintendent at night—and some others occasionally. If, however, the simple recommendations herein submitted be adopted, I believe the business can be so systematized that it will very seldom be necessary to work excessively.

The recommendations on pages 12, 18g, and 18i of this report are those that most immediately affect the efficiency of the office work. Those I beg to reiterate most earnestly and to add the following:

I recommend that the two summer clerks be provided for the months of July, August, and September.

At the time I assumed the duties of the office, the preceding appropriation for this department had provided for two summer clerks during the months of June, July, and August; and it was in accordance with my recommendation that in the last appropriation bill the month of June was excluded. I made that recommendation simply because I had observed that it was not until the first of July that the business of the office swelled beyond the powers of the regular force; but, although that judgment has been confirmed by further experience, I have discovered that the services of the two summer clerks are needed sorely throughout the month of September.

There is one feature of the relations between the Department of Education and the State Printing Board that should be reported, lest it should at some time appear as an irregularity. The established arrangement is satisfactory to this department, and no recommendation is offered, if the Legislature considers the practice regular; if not, it should be duly authorized, or some other suitable procedure should be prescribed:

The State Printing Board purchases paper for the State printing in carload lots, also the printing of other departments is charged to the appropriation for the said Board; but a special appropriation for "printing and distributing" the supplies for the public schools and school officers has regularly been made for the Department of Education. Under this arrangement, the printing for this department has always been paid for from its proper appropriation, but the paper has been furnished to this department, as to all others, by the Printing Board, who approve all orders for printing. There has been an occasional exception to this rule, when this department has been charged with and has paid for some special supplies of light-weight paper for examination questions, gotten in order to avoid the cost of postage on the heavier paper in the stock of the Board. Until the present Expert Printer entered upon the duties of his office, paper was supplied for the printing orders of this department on the same footing as for those of any other; but the present Expert Printer, with his characteristic carefulness and accuracy, and recognizing some possible doubt as to the proper construction of the appropriation to the Department of Education for "printing and distributing," has kept exact account of the value of the paper furnished for the orders for printing from that department. He has rendered statements of this account at regular intervals, and the amount accruing since November 1, 1900, as rendered in a statement dated October 20, 1902, is \$3,279.64.

It would therefore seem proper in the next appropriation bill to do one of three things: (1) Insert in the regular appropriation for the "printing and distributing" of this department a clause clearly stating that the paper for said

printing shall be furnished by the State Printing Board,—unless, indeed, that be deemed clear already; or (2), increase the appropriation to cover the cost of paper, and require the department to pay the Board,—a useless transference of money from one pocket to the other, it would seem; or (3), reduce this department's appropriation for printing and distributing by the proper amount to cover the cost of printing, and let both the paper and the printing be charged to the Board.

I offer grateful acknowledgments to the daily press for publication of official notices, and several decisions in appeal cases that were of general interest; also to the educational journals for similar publications. Carbon copies of all notices and all formal decisions have been sent to the *Texas School Journal* and to the *School Magazine*; the former has published everything in full, the latter doubtless as far as its space has permitted. I wish, however, to state more than merely my high appreciation of these courtesies: they have rendered a genuine public service. For the duty of hearing and determining "all appeals from the rulings and decisions of subordinate school officers," which once threatened almost to overwhelm the State Superintendent, has grown less onerous during the last six months; and I attribute the happy result partly to the fact that the county superintendents (and teachers and trustees) to a large extent see the decisions published in the school journals, and that various questions have thus become settled with many of those officers. Where heretofore they have told contending parties, "If you are not satisfied with my decision, appeal to the State Superintendent," I am informed that many are now able to say, "It is useless to appeal to the State Superintendent, because here is a recent opinion of his covering the identical question."

Hardly a day passes in which more than one matter does not come up in which formal appeals are avoided by suitable rulings or correspondence, often involving careful study and lengthy explanations. But when one considers the 16,000 teachers, the 40,000* trustees, the innumerable parents or guardians, the crude community system (or rather lack of system which still survives in thirty-one counties), and a hundred other possible sources of contentions, it is a striking testimony to the conservatism, sound sense and good character of the great majority of these persons—and to like characteristics of the great majority of county superintendents—that so little litigation reaches the State Superintendent. As for appeals from the State Superintendent to the State Board of Education, since July 1, 1902, only ten cases have reached that tribunal; and it is proper to state that in every instance the decision of the State Superintendent has been sustained. As far as I am aware not one of those ten cases has yet been appealed to a district court.

CONCLUSION.

This report has been exclusively occupied with immediate practical exigencies, and no attempt can be made to deal with the more general aspects of education, although the latter constitute the highest grounds upon which to invoke needed attention to practical means. But, surely, all of us know that the State has a vital concern in offering educational opportunities to as many of its citizens as possible, because right education is the only way of deliverance from thralldom to ignorance and pre-

*See page 15 of this report, and compare a military organization that would provide two or three colonels for every captain.

judice (that most dangerous of all bondages to a self-governing people) ; because only loyalty to truth and patient search for it can make and keep us free, even as that intelligent sympathy with all human activities, which is the very test of the truly educated man, alone can make and keep us kind. Moreover, the high and true aim in education is the practical and efficient one, simply because the incidental utilities are included. Does it make one's skill in any matter less marketable because he sees that enlightened character, useful power, and inner freedom constitute in themselves a still better reward for his studies than the wages they enable him to earn? As water must ascend to the sky before it can descend in fertilizing rains or powerful, down-flowing streams, even so the most practical results of life, as it spends itself in true work and enjoyment, come directly from ascending thought and emotion, without which life could only lash and toss itself in a confined sea of chaos.

In conclusion, I desire to express the thanks due from me to the members of the State Board of Education, to the members of the State Board of Examiners, to the faithful clerks in this office, to the county officials, and to the great body of superintendents, teachers, and trustees, and to assure them that if I have failed or erred at any point in my share of our united work it has not been because of wavering purpose or voluntary neglect.

The adjoined statistical tables are hereby attested and made a part of this report.

All of which is respectfully submitted.

ARTHUR LEFEVRE,
State Superintendent of Public Instruction.

* Portion of county is organized under district system—said portion not included in this table. † County superintendent.

General Summary of Table No. 1, Scholastic Population and State Apportionment of the Available School Fund for the School Year Ending August 31, 1901.

Total School Population (over 8 and under 17 years of age).....	729,217
State Apportionment per capita for the school year ending August 31, 1901.. \$	4 75
Grand Total Amount of the State Apportionment.....	\$ 3,463,780 75

District counties outside of cities and towns:	
The number of male children.....	222,903
The number of female children.....	210,558
Total in district counties.....	433,461
State apportionment.....	\$ 2,058,939 75
Community counties outside of cities and towns:	
The number of male children.....	71,674
The number of female children.....	66,401
Total in community counties.....	138,075
State apportionment.....	\$ 655,856 25
District and community counties combined:	
The number of male children.....	294,577
The number of female children.....	276,959
Total in district and community counties.....	571,536
State apportionment in district and community counties.....	\$ 2,714,796 00
Cities and towns or independent districts:	
The number of male children.....	77,410
The number of female children.....	80,271
Total in cities and towns.....	157,681
State apportionment.....	\$ 748,984 75
The enumeration for the State at large:	
The number of male children enumerated.....	371,987
The number of female children enumerated.....	357,230
Total school population.....	729,217
State apportionment.....	\$ 3,463,780 75

I hereby certify that the foregoing is a true and correct abstract of the scholastic census and the State apportionment of public school funds for the State of Texas for the year beginning September 1, 1900, and ending August 31, 1901.

J. S. KENDALL,
State Superintendent of Public Instruction.

SUMMARY OF TABLE NO. 2, DIVISIONS A, B AND C.

Enrollment of children for year 1900-1901.	White.			Colored.			Grand Total.
	Male.	Female.	Total.	Male.	Female.	Total.	
Pupils within school age enrolled in 191 district counties.....	147,106	141,700	288,806	30,383	33,545	63,928	352,734
Pupils over school age enrolled in 191 district counties.....	9,203	5,462	14,665	652	923	1,575	16,240
Pupils under school age enrolled in 191 district counties.....	17,544	18,085	35,629	1,867	1,898	3,765	39,394
Total enrollment in district counties.....	173,853	165,247	339,100	32,902	36,306	69,208	408,368
Pupils within school age enrolled in 33 community counties.....	33,742	31,788	65,530	18,865	20,220	39,084	104,624
Pupils over school age enrolled in 33 community counties.....	1,912	1,093	3,005	417	557	974	3,979
Pupils under school age enrolled in 33 community counties.....	3,629	3,734	7,363	1,178	1,347	2,525	9,908
Total enrollment in community counties.....	39,283	36,635	75,918	20,460	22,123	42,583	118,511
Pupils within school age enrolled in district and community counties.....	180,848	173,488	354,336	49,248	53,774	103,022	457,358
Pupils over school age enrolled in district and community counties.....	11,115	6,555	17,670	1,069	1,480	2,549	20,219
Pupils under school age enrolled in district and community counties.....	21,173	21,849	43,012	3,045	3,245	6,290	49,302
Total enrollment in district and community counties.....	213,136	201,892	415,018	53,362	58,499	111,861	526,879
Pupils within school age enrolled in independent districts.....	43,695	47,406	91,101	10,091	12,665	22,756	114,428
Pupils over school age enrolled in independent districts.....	1,740	1,513	3,253	115	145	260	3,513
Pupils under school age enrolled in independent districts.....	4,253	4,516	8,769	535	643	1,178	9,947
Total enrollment of children in independent districts.....	49,659	53,525	103,184	11,251	13,453	24,704	127,888
Pupils within school age enrolled in the State at large.....	224,514	220,984	445,498	59,849	66,439	126,288	571,786
Pupils over school age enrolled in the State at large.....	12,855	8,068	20,923	1,184	1,625	2,809	23,732
Pupils under school age enrolled in the State at large.....	25,426	26,355	51,781	3,580	3,888	7,468	59,249
Total enrollment in the State.....	262,795	255,407	518,202	64,613	71,952	136,565	654,767
High schools: white, 215; colored, 32; total, 247.							
Pupils enrolled in high schools, 1900-1901.....	White.			Colored.			Grand Total.
	Male.	Female.	Total.	Male.	Female.	Total.	
NOTE.—These pupils are included in the table above.	5,588	8,365	13,953	292	659	951	14,904

Pupils enrolled in high schools, 1900-1901.....

NOTE.—These pupils are included in the table above.

SUMMARY OF TABLE NO. 4, COUNTIES, CITIES AND TOWNS.

Certificates held by teachers for the school year 1900-1901.	White.			Colored.			Grand Total Certificates.
	Male.	Female.	Total.	Male.	Female.	Total.	
Third grade certificates held by teachers in 191 district counties.....							
Third grade certificates held by teachers in 33 community counties.....	75	185	260	80	148	228	488
Third grade certificates held by teachers in district and community counties.....	129	268	397	146	252	398	795
Third grade certificates held by teachers in 272 independent districts.....	1	63	64	10	21	31	95
Total third grade certificates	130	331	461	156	273	429	890
Second grade certificates held by teachers in 191 district counties.....							
Second grade certificates held by teachers in 33 community counties.....	1,751	2,445	4,196	595	546	1,141	5,337
Second grade certificates held by teachers in district and community counties.....	524	650	1,174	375	305	680	1,854
Second grade certificates held by teachers in cities and towns.....	2,275	3,095	5,370	970	851	1,821	7,191
Second grade certificates held by teachers in cities and towns.....	26	47	73	68	166	234	717
Total second grade certificates.....	2,301	3,582	5,883	1,038	1,017	2,055	7,938
First grade certificates held by teachers in 191 district counties.....							
First grade certificates held by teachers in 33 community counties.....	1,846	1,320	3,166	171	46	217	3,383
First grade certificates held by teachers in district and community counties.....	325	213	538	105	31	136	684
First grade certificates held by teachers in cities and towns.....	2,181	1,533	3,714	276	77	353	4,067
First grade certificates held by teachers in 272 cities and towns.....	322	785	1,107	102	54	156	1,263
Total first grade certificates.....	2,503	2,318	4,821	378	131	509	5,330
Permanent certificates held by teachers in 191 district counties.....							
Permanent certificates held by teachers in 33 community counties.....	199	99	298	36	4	40	338
Permanent certificates held by teachers in district and community counties.....	43	9	52	18	4	22	74
Permanent Certificates held by teachers in cities and towns.....	242	108	350	54	8	62	412
Permanent Certificates held by teachers in cities and towns.....	250	463	713	48	31	79	792
Total permanent certificates.....	492	571	1,063	102	39	141	1,204
Total number of certificates held by teachers in 191 district counties.....							
Total number of certificates held by teachers in 33 community counties.....	3,917	4,049	7,966	863	734	1,597	9,563
Total number of certificates held in district and community counties.....	957	939	1,896	573	467	1,040	2,096
Total number of certificates held by teachers in cities and towns.....	4,874	4,988	9,862	1,436	1,201	2,637	12,499
Total number of certificates held by teachers in cities and towns.....	602	1,783	2,385	223	267	490	2,875
Grand total number of certificates held	5,476	6,771	12,247	1,659	1,468	3,127	15,374
Teachers employed for school year 1900-1901.							
Teachers employed in 191 district counties, rural schools.....							
Teachers employed in 33 community counties, rural schools.....	3,917	4,049	7,966	863	734	1,597	9,563
Teachers employed in district and community counties, rural schools.....	957	949	1,896	573	467	1,040	2,096
Teachers employed in cities and towns, constituting independent districts.....	4,874	4,988	9,862	1,436	1,201	2,637	12,499
Teachers employed in cities and towns, constituting independent districts.....	602	1,783	2,385	223	267	490	2,875
Grand total number of teachers employed.....	5,476	6,771	12,247	1,659	1,468	3,127	15,374

TABLE NO. 5, DIVISION A, DISTRICT COUNTIES.—MISCELLANEOUS—continued.

DISTRICT COUNTIES.	Number of schools taught.			Average num- ber of days schools were in session.			Average number of teachers.			Total number of days teaching done by all the teachers. SUMMARY OF TABLE NO. 5, COUNTIES, CITIES AND TOWNS.

The number of schools taught during the school year 1900-1901.			
	White.	Colored.	Total.
Rural schools taught in 191 district counties.....	6,427	1,482	8,909
Rural schools taught in 33 community counties.....	1,622	329	1,951
Rural schools taught in district and community counties.....	8,049	2,411	11,460
Number of schools taught in 272 independent districts.....	456	135	649
Total number of schools taught in the State.....	8,505	2,604	12,109
The number of teachers employed during the school year 1900-1901.			
	White.	Colored.	Total.
Teachers employed in rural schools, 191 district counties.....	7,966	1,597	9,563
Teachers employed in rural schools, 33 community counties.....	1,896	1,040	2,936
Teachers employed in rural schools in district and community counties.....	9,862	2,637	12,499
Teachers employed in 272 independent districts.....	2,385	490	2,875
Total number of teachers employed.....	12,247	3,127	15,374
Average or least number of teachers that could have done the work in the given time.			
	White.	Colored.	Total.
Average number of teachers required in the rural schools in 191 district counties.....	7,865.20	1,645.35	9,500.55
Average number of teachers required in the rural schools in 33 community counties.....	1,786.95	994.91	2,781.86
Average number of teachers in rural schools in district and community counties.....	9,652.15	2,570.36	12,222.51
Average number of teachers required in 272 independent districts.....	2,327.98	474.02	2,802.00
Total average number of teachers.....	11,980.13	3,044.38	15,024.51

NOTE.—A school employs 2 teachers full time and one teacher half time or (time of) 2.50 teachers. Hence this table.

The number of days teaching done by all teachers for school year 1900-1901.			
	White.	Colored.	Total.
Days teaching done in rural schools in 191 district counties.....	783,539	148,261	931,800
Days teaching done in rural schools in 33 community counties.....	180,130	88,816	268,946
Days teaching done in district and community counties.....	963,669	237,077	1,200,746
Days teaching done in 272 independent districts.....	375,852	80,188	456,020
Grand total number of days teaching done by all teachers.....	1,339,501	317,265	1,656,766

Average school term for 1900-1901—months and days.					
	White in months.	Colored in months.	General average in months.	White in days.	Colored in days.
Average school term for rural schools in 191 district counties.....	4.98	4.54	4.90	99.62	90.65
Average school term for rural schools in 33 community counties.....	5.04	4.75	4.94	100.80	94.99
Average school term for all rural schools in district and community counties.....	4.99	4.59	4.91	99.84	91.81
Average school term in 272 independent districts.....	8.07	8.35	8.13	161.44	167.05
Grand total average school term for the State at large.....	5.59	5.21	5.51	111.81	104.21
					110.27

NOTE.—The average school term is found by dividing the number of days teaching done by the number of teachers doing the work.

The number of graded schools, 1900-1901.			
	White.	Colored.	Total.
Rural schools that are graded in 191 district counties.....	673	123	796
Rural schools that are graded in 33 community counties.....	102	52	154
Rural schools that are graded in district and community counties.....	775	135	910
Schools that are graded in 272 independent districts.....	408	146	554
Total number of graded schools.....	1,183	301	1,484

SUMMARY OF TABLE NO. 5 COUNTIES, CITIES AND TOWNS—continued.

The number of ungraded schools, 1900-1901.			
	White.	Colored.	Total.
Rural schools that are ungraded in 191 district counties.....	5,852	1,399	7,151
Rural schools that are ungraded in 33 community counties.....	1,419	874	2,293
Rural schools that are ungraded in district and community counties.....	7,271	2,173	9,444
Schools that are ungraded in 272 independent districts.....	57	48	85
Total number of ungraded schools.....	7,308	2,221	9,529

Single desks for seating children in use in the schools.			
	White.	Colored.	Total.
Single desks in rural schools in 191 district counties.....	9,679	4,464	14,143
Single desks in rural schools in 33 community counties.....	1,831	2,086	3,917
Single desks in rural schools in district and community counties.....	11,510	6,550	18,060
Single desks in use in 272 independent districts.....	47,404	4,148	51,552
Total number of single desks in use in public schools.....	58,914	10,688	69,612

Double desks in use for seating children.			
	White.	Colored.	Total.
Double desks in rural schools in 191 district counties.....	96,759	8,868	105,627
Double desks in rural schools in 33 community counties.....	11,030	5,240	16,270
Double desks in rural schools in district and community counties.....	107,789	14,108	121,897
Double desks in use in 272 independent districts.....	30,712	8,883	39,595
Total number of double desks in use in public schools.....	138,501	22,991	161,492

Benches for seating children.		
White.	Colored.	Total.
2,433	842	3,275
2,273	2,883	5,156
4,706	3,725	8,431
87	123	210
Total number of rooms furnished with benches.....		8,641
Libraries reported for 1900-1901.		
White.	Colored.	Total.
131	10	141
28	2	30
158	12	171
238	41	279
Total number of libraries in counties and independent districts.....		450
Volumes contained in the libraries.		
White.	Colored.	Total.
10,917	190	11,107
2,345	146	2,491
13,262	336	13,598
69,987	6,750	76,737
Total libraries in the schools.....		90,335

SUMMARY OF TABLE NO. 10.
Receipts and Expenditures of Available School Fund for the Scholastic Year Ending August 31, 1901.

	From State and county apportion- ment.	From local tax, tuition, etc.	Total.	Grand Total.
RECEIPTS.				
Balances from previous year.....				
From State apportionment for 1900-1901.....	\$ 243,756 90	\$ 158,017 72	\$ 401,774 62	
From county available fund, apportioned to counties and independent districts.....	3,463,780 75		3,463,780 75	
From transfers for pupils changed from one district to another.....	347,543 94		347,543 94	
From local taxes in county districts and independent districts.....	75,972 12		75,972 12	
From tuition of pupils over and under school age.....		1,089,686 80	1,089,686 80	
From all other sources.....	15,802 69	51,125 28	66,927 97	
Total.....	\$ 4,146,856 40	\$ 1,553,536 87	\$ 5,700,393 27	
Balances overpaid by treasurers.....	1,644 79	5,356 05	7,000 84	
Total receipts.....	\$ 4,148,501 19	\$ 1,558,892 92	\$ 5,707,394 11	\$ 5,707,394 11
DISBURSEMENTS.				
Balances refunded treasurers, overpaid by them last year.....				
Paid teachers, including principal.....	\$ 2,382 58	\$ 2,937 74	\$ 5,220 32	
Paid for supervision to county judges, county superintendents, and superintendents of independent districts.....	3,500,119 35	676,076 66	4,176,196 01	
Paid for taking census.....	96,186 43	25,195 73	121,382 16	
Paid for school sites, buildings, rent and repairs.....	28,739 94	5,891 77	34,631 71	
Paid for furniture, apparatus, libraries and school supplies.....	10,497 44	274,450 36	284,947 80	
Paid for fuel, water and insurance.....	4,514 87	62,508 89	67,023 76	
Paid for printing, postage, stationery, clerks, janitors and sanitation.....	1,438 08	61,591 20	63,029 28	
Paid for assessing and collecting taxes.....	1,566 61	79,445 65	81,012 26	
Paid for treasurers' commissions.....	25,503 39	13,413 57	38,916 96	
Transferred to independent districts on county apportionment.....	62,901 04	8,337 61	71,238 65	
Transferred to other counties for county line districts.....	39,739 44		39,739 44	
Transferred to independent districts for pupils transferred.....	39,414 12		39,414 12	
Paid for borrowed money, interest and all other purposes.....	6,133 26	27,800 43	33,933 69	
Total amount of disbursements.....	\$ 3,819,036 55	\$ 1,237,649 61	\$ 5,056,686 16	
Balance on hand August 31, 1901.....	329,222 17	321,385 78	650,707 95	
Total.....	\$ 4,148,358 72	\$ 1,559,035 39	\$ 5,707,394 11	\$ 5,707,394 11
Less amount of transfers.....	79,153 56		79,153 56	
Net amount actually disbursed for public schools.....	\$ 4,069,205 16	\$ 1,559,035 39	\$ 5,628,240 55	

BALANCES AUGUST 31, 1900.

Balances in hands of treasurers, as shown by their reports for 1900-1901.....	\$	401,609 34
Beaumont made no report for 1900, but reports balance brought forward for 1900-1901.....		165 28

Total balances reported.....	\$	401,774 62
Balances August 31, 1900, not accounted for by treasurers in reports for 1900-1901 (see note A below).....		3,539 01

"A"

1901.....	8-17	564,500	164,717	729,217	4 75	3,463,780	3.2	571,786

* Decrease.

† Decrease 8 4-5 per cent. because of revision of census law.

‡ A continued decrease because of a more accurate census.

NOTE.—The statistics of the schools of the State during the earlier years of their history were in many respects inaccurate and incomplete, as the above table shows. For the years from 1872 to 1880, and for 1883-84, the reports of the scholastic census do not show the respective numbers of white and colored children. The late reports show the number of each race, as well as the number of males and females of each race, but it is not deemed necessary to show in this connection the number of males and females.

SUMMARY OF TABLE NO. 1.

General Summary of School Census and State Apportionment of the Available School Fund for the School Year Ending August 31, 1902.

Total School Census that are over 8 and under 17 years of age..... 739,573
 State Apportionment per capita for school year ending August 31, 1902.. \$ 4 75
 Grand Total Amount of State Apportionment..... 3,512,971 75

Enumeration for the State at Large.	White.	Colored.	Total.
District counties outside of independent districts:			
Number of male children.....	187,829	41,524	229,353
Number of female children.....	175,260	40,951	216,211
Total in district counties.....	363,089	82,475	445,564
Community counties outside of independent districts:			
Number of male children.....	44,374	22,441	66,815
Number of female children.....	40,923	22,086	63,009
Total in community counties.....	85,297	44,527	129,824
Cities and towns constituting independent districts:			
Number of male children.....	62,112	18,494	80,606
Number of female children.....	64,015	19,564	83,579
Total in cities and towns.....	126,127	38,058	164,185
Total number of male children over 8 and under 17.....	294,315	82,459	376,774
Total number of female children over 8 and under 17.....	280,198	82,601	362,799
Grand total of school census.....	574,513	165,060	739,573

I hereby certify that the foregoing is a true and correct abstract of the scholastic census and the State apportionment of public school funds for the State of Texas for the year beginning September 1, 1901, and ending August 31, 1902.

ARTHUR LEFEVRE,
 State Superintendent of Public Instruction.

SUMMARY OF TABLE NO. 5--DIVISIONS A, B, AND C--MISCELLANEOUS.

Number of districts or communities formed for 1901-1902.	Districts.		Total.
	Districts.	Communities.	
Number of common school districts formed in 196 district counties.....	5,751		
Number of common school districts formed in 32 community counties.....	195		
Number of communities formed in 32 community counties.....		2,500	
Number of independent districts that have assumed control of their schools.....			288

The number of schools taught in school year 1901-1902.	Colored.		Total.
	White.	Colored.	
Number of rural schools taught in 196 district counties.....	8,271	1,469	9,740
Number of rural schools taught in 32 community counties.....	1,560	1,884	2,444
Number of rural schools taught in district and community counties.....	9,831	2,353	12,184
Number of schools taught in 288 independent districts.....	383	183	566
Grand total number of schools taught in the State.....	10,214	2,536	12,750

Number of days teaching done by all teachers for 1901-1902.	Colored.		Total.
	White.	Colored.	
Days teaching done in 196 district counties.....	661,705	163,867	825,572
Days teaching done in 32 community counties.....	176,239	85,279	261,518
Days teaching done in district and community counties.....	837,944	249,146	1,087,090
Days teaching done in 288 independent districts.....	418,668	86,076	504,744
Grand total number of days teaching done in the State.....	1,256,612	335,222	1,591,834

SUMMARY OF TABLE NO. 5—DIVISIONS A, B, AND C—MISCELLANEOUS—continued.

Net number of teachers employed for 1901-1902.		White.	Colored.	Total.
Teachers employed in rural schools in 196 district counties.....		8,065	1,082	9,747
Teachers employed in rural schools in 32 community counties.....		1,820	956	2,776
Teachers employed in rural schools in district and community counties.....		9,885	2,038	12,523
Teachers employed in 288 independent districts.....		2,557	539	3,096
Grand total net number of teachers employed.....		12,442	3,177	15,619

Average annual school term in months for 1901-1902.				
White in days.	Colored in days.	General average in days.	White in months.	Colored in months.
82.05	97.42	84.70	4.10	4.87
96.91	89.12	94.51	4.94	4.46
8.77	94.04	86.73	4.24	7.00
103.73	104.70	103.03	8.19	7.98
100.99	105.51	101.91	5.09	5.28
General average annual school term for the State.....				5.10

Pupils unable to read when they entered school, 1901-1902.				
White.		Colored.		Grand total.
Male.	Female.	Male.	Female.	Total.
31,751	27,152	9,154	9,112	18,266
8,002	7,307	5,445	5,388	10,833
39,813	34,459	14,599	14,500	29,099
9,356	8,424	4,052	4,228	8,280
49,169	42,883	18,651	18,738	37,379
Grand total number of pupils unable to read when they entered school.....				129,431

SUMMARY OF TABLE NO. 5—DIVISIONS A, B, AND C—MISCELLANEOUS—continued.

Number and character of school desks in use in the year 1901-1902.	Single desks.			Double desks.			Grand total.
	White.		Total.	White.		Total.	
	Colored.	Total.		Colored.	Total.		
Number of desks in rural schools in 196 district counties.....	12,412	1,010	13,422	108,778	10,393	119,171	132,593
Number of desks in rural schools in 32 community counties.....	2,645	530	3,175	14,938	5,719	20,657	23,832
Number of desks in use in district and community counties.....	15,057	1,540	16,597	123,716	16,112	139,828	156,425
Number of desks in use in 288 independent districts.....	50,895	3,875	54,770	35,860	10,062	45,922	100,692
Grand total number of desks in use for 1901-1902.....	65,952	5,415	71,367	159,576	26,174	185,750	257,117

Number of graded and ungraded schools for 1901-1902.	Graded.			Ungraded.			Grand total.
	White.		Total.	White.		Total.	
	Colored.	Total.		Colored.	Total.		
Number of graded and ungraded schools in 196 district counties.....	754	209	963	5,481	1,321	6,802	7,765
Number of graded and ungraded schools in 32 community counties.....	111	62	173	1,452	820	2,272	2,445
Number of graded and ungraded schools in district and community counties.....	865	271	1,136	6,933	2,141	9,074	10,210
Number of graded and ungraded schools in 288 independent districts.....	367	147	514	16	36	52	568
Grand total number of graded and ungraded schools in the State.....	1,232	418	1,650	6,949	2,177	9,126	10,776

Number of rooms furnished with benches, 1901-1902.	White.		Total.	Colored.		Total.		
	White.			Colored.				
	Colored.	Total.		Colored.	Total.			
School rooms furnished with benches in 196 district counties.....	2,571	1,051	3,622	2,571	1,051	3,622		
School rooms furnished with benches in 32 community counties.....	2,641	501	3,142	2,641	501	3,142		
School rooms furnished with benches in district and community counties.....	5,212	1,552	6,764	5,212	1,552	6,764		
School rooms furnished with benches in 288 independent districts.....	727	141	868	727	141	868		
Grand total number of rooms furnished with benches.....	5,939	1,693	7,632	5,939	1,693	7,632		

SUMMARY OF TABLE NO. 5—DIVISIONS A, B, AND C—MISCELLANEOUS—continued.

Schools furnished with libraries in 1901-1902.			
	White.	Colored.	Total.
Schools furnished with libraries in 196 district counties.....	163	4	167
Schools furnished with libraries in 32 community counties.....	47	9	56
Schools furnished with libraries in 288 independent districts.....	256	48	307
Grand total number of schools furnished with libraries.....	466	61	530

Number of volumes contained in the libraries 1901-1902.			
	White.	Colored.	Total.
Volumes contained in the libraries of rural schools in 196 district counties.....	19,747	55	19,802
Volumes contained in the libraries of rural schools in 32 community counties.....	2,913	481	3,394
Volumes contained in the libraries of 288 independent districts.....	77,987	7,241	85,228
Grand total number volumes in the school libraries.....	100,647	7,777	108,424

TABLE NO. 6—DIVISION A—DISTRICT COUNTIES.

1901-1902.	District counties.	Amount paid teachers.										Expenditures for other purposes.	Grand total expenditures by county superintendent.

SUMMARY OF TABLE NO. 9—DIVISIONS A, B, AND C.

Showing the Amounts Apportioned by the County Superintendents, from State and County funds, After Deducting the Cost of Supervision, etc.; and Amounts Received from Local Taxes, Tuition, Donations, etc.

Apportioned from State and county funds for the year 1901-1902.		White.	Colored.	Total.
State and county funds apportioned to 106 district counties.....		\$ 1,824,713 24	\$ 294,049 72	\$ 2,118,762 96
State and county funds apportioned to 32 community counties.....		399,014 72	105,506 47	504,521 20
State funds apportioned to district and community counties.....		2,223,727 97	489,646 19	2,713,374 16
State funds apportioned to 290 independent districts.....		542,709 18	186,496 59	729,205 77
County funds apportioned to 290 independent districts.....		66,281 66	9,789 29	76,070 85
State and county funds apportioned to independent districts.....		608,990 74	106,285 88	805,276 62
Grand total apportioned by county superintendents.....		2,832,718 71	685,932 07	3,518,650 78

Amounts received from local taxes, to supplement the school fund for 1901-1902.		White.	Colored.	Total.
Local taxes collected in 196 district counties, outside of independent districts.....		\$ 335,918 35	\$ 14,674 63	\$ 350,592 98
Local taxes collected in 32 community counties, outside of independent districts.....		10,719 28	382 56	11,101 84
Local taxes collected in the district and community counties.....		346,637 63	15,057 19	361,694 82
Local taxes collected in the independent districts.....		739,699 01	3,018 91	742,717 92
Grand total local taxes collected, to supplement the school fund.....		1,086,336 64	18,076 10	1,104,412 74

Amounts received from tuition of overs and unders, donations, and other sources, for 1901-1902.		White.	Colored.	Total.
Received from tuition, donations, and other sources in 196 district counties.....		\$ 80,189 03	\$ 3,123 70	\$ 83,312 73
Received from tuition, donations, and other sources in 32 community counties.....		8,458 94	185 35	8,644 29
Received from tuition, donations, and other sources in district and community counties.....		86,647 97	3,309 05	89,957 02
Received from tuition, donations, and other sources in 290 independent districts.....		169,757 89	3,651 51	173,409 40
Grand total received from tuition, donations, and other sources.....		236,405 86	8,960 56	245,366 42

SUMMARY OF TABLE NO. 9—DIVISIONS A, B, AND C—continued.

Showing the Amounts Apportioned by the County Superintendents, from State and County Funds, After Deducting the Cost of Supervision, etc.; and Amounts Received from Local Taxes, Tuition, Donations, etc.

	Total amount of school funds from all sources, as reported by county and city superintendents, for 1901-1902.		
	White.	Colored.	Total.
Total amount reported for rural schools in 196 district counties.....	\$ 2,240,820 62	\$ 311,848 05	\$ 2,552,668 67
Total amount reported for rural schools in 32 community counties.....	416,192 95	196,164 98	612,357 33
Total amount reported for rural schools in the district and community counties.....	2,657,013 57	508,012 43	3,165,026 00
Total amount reported for 290 independent districts.....	1,518,447 64	294,956 30	1,723,403 94
Grand total amount of school funds reported by county and city superintendents.....	4,175,461 21	712,968 73	4,888,429 94

TABLE NO. 10—COUNTIES AND INDEPENDENT DISTRICTS.
Receipts of the Public Free School Funds for the School Year Ending August 31, 1902, as Reported by Treasurers.

Counties and Independent Districts.	State and county available fund and amounts transferred.							Local taxes, tuition and other local sources.				Total receipts from all sources.			Grand total.
	Cash brought forward from previous year.	Amount received from State apportionment 1901-1902.	Amount received from county available fund.	Amount received by independent districts from county apportionment.	Amount received of pupils by transfer of from other sources.	Amount received from tuition.	Cash brought forward from previous year.	Amount received from local school taxes.	Amount received from tuition of pupils not entitled to free tuition.	Amount received from all other sources.	Total receipts from State and county and amounts transferred.	Total receipts from local taxes, tuition and other local sources.	Balances overpaid by treasurers in excess of receipts.		
													State, county, etc.	Local taxes, etc.

* Decrease.

† Decrease 8 4-5 per cent. because of revision of census law.

‡ A continued decrease because of a more accurate census.

NOTE.—The statistics of the schools of the State during the earlier years of their history were in many respects inaccurate and incomplete, as the above table shows. For the years from 1872 to 1880, and for 1883-84, the reports of the scholastic census do not show the respective number of white and colored children. The late reports show the number of each race, as well as the numbers of males and females of each race, but it is not deemed necessary to show in this connection the number of males and females.
